

# Managing Maine's White-tailed Deer 2000-2015

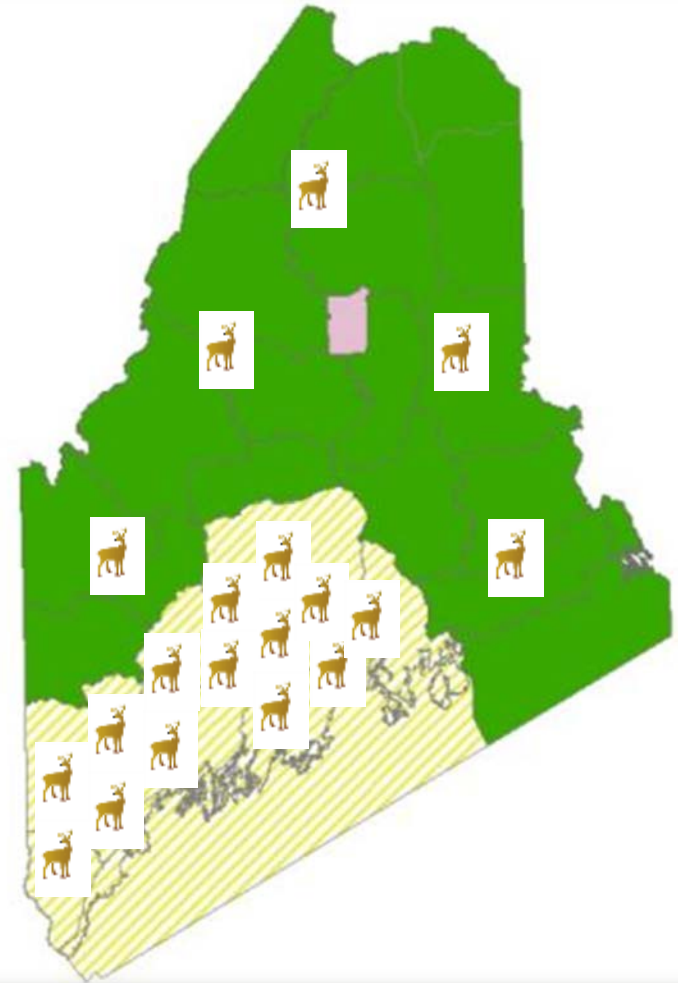

By  
Kyle Ravana  
State Deer Specialist

# Some Context

- Late-1980s → 1990s
  - Increase Deer Abundance
- Differences in productivity

# Deer Management Goals & Objectives: Western, Northern, and Eastern

- Short-term
  - Provide hunting and viewing opportunity for white-tailed deer, while preventing over-browsing of deer wintering habitat.
- Long-term
  - Increase "..."
- Objectives:
  - Short-term → 50%–60% MSP
  - Long-term
    - 10 deer/mi<sup>2</sup>
    - 15 deer/mi<sup>2</sup>

# Deer Management Goals & Objectives: Southern and South Central

- Balance the desire for deer hunting and viewing opportunity with the needs to reduce negative impacts of deer from browsing damage, collisions with motor vehicles, and potential risk of Lyme disease.
- Objectives:
  - 15 deer/mi<sup>2</sup>
  - 20 deer/mi<sup>2</sup>

# So Now What???

- Update WSI System

# So Now What???

- Update WSI System
- New Planning Horizon
  - Public Surveys
  - New Goals & Objectives
  - Updated Management System

# Pennsylvania Game Commission

“Deer management recommendations are based on deer impacts on themselves, the forest, and the people, not a single number. If the forest is healthy, the deer are healthy, and the people tolerant of the level of deer–human conflicts, then it doesn’t matter if there are 20 or 30 deer per square mile. The goals of the deer management plan have been met.”

Thank You!
