| Area - 141 acres | Temperatures |
| | Surface - 76°F |
| Maximum depth - 28 feet | 28 feet - 61°F |

Principal fisheries: Brook trout,
smallmouth bass

Many sportsmen consider Ingalls Pond to be one of the best smallmouth bass lakes in the Bridgton area. There is an abundance of suitable spawning area for the smallmouths, however, the population is not abundant. A population of stunted yellow perch provides an excellent forage base for the smallmouth bass.

Stocking catchable-size brook trout each spring in Ingalls Pond has provided an excellent trout fishery.

Smelts were introduced by the Department of Inland Fisheries and Wildlife in 1983. However, except for a few years after the initial introduction, populations have not been very abundant.

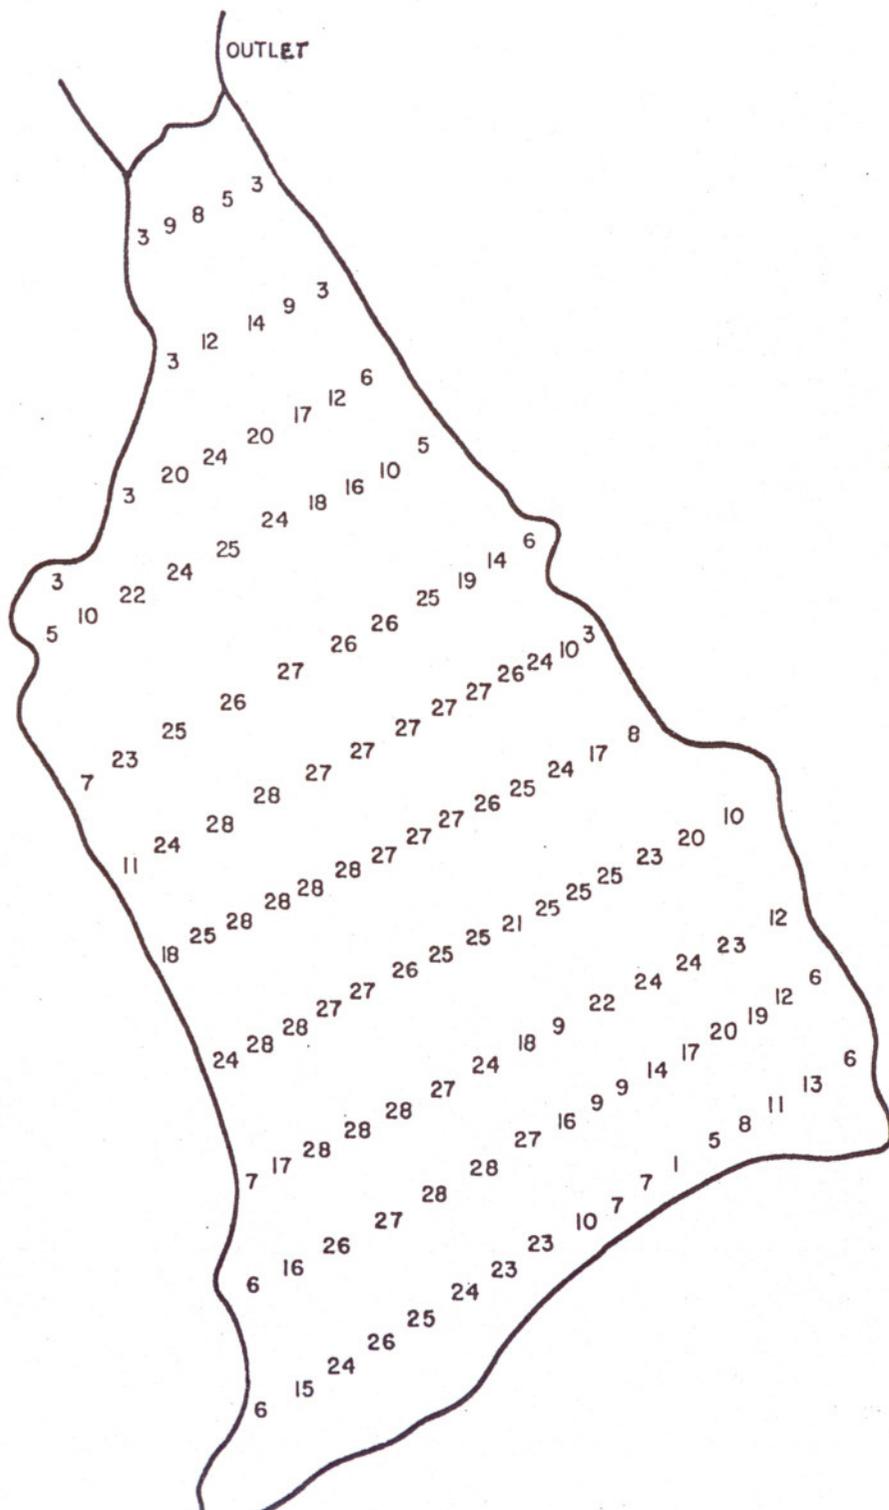

Access is very limited and undeveloped. The pond is open to fishing both summer and winter under general law regulations except a liberal law of no size and bag limit is in effect on bass.

Surveyed - August, 1960
