

FROST POND
Sedgwick Twp., Hancock Co.
U.S.G.S. Blue Hill, Me.

Fishes

Brook trout (squaretail)	White sucker
White perch	Minnnows
Yellow perch	Golden shiner
Hornpout (bullhead)	Banded killifish
Eel	Sunfish

Physical Characteristics

Area - 154 acres	Temperatures
	Surface - 76°F
Maximum depth - 34 feet	34 feet - 60°F

Principal fisheries: Brook trout, white perch

Nestled among wooded hills and blueberry covered slopes, Frost Pond is a marshy, coastal pond that drains into the scenic Bagaduce River in southwestern Hancock County. The access roads branch off the Sedgwick Ridge Road. There is no publicly operated boat landing at the pond.

Fishery management should emphasize the established fish populations of this pond. Although a small volume of cool water is present, it is poorly oxygenated and generally unsuitable for trout or other coldwater gamefish. While a few trout are reported to be caught, warmwater gamefish such as white perch, yellow perch, and hornpout dominate at Frost Pond.

No stocking is recommended.
