T22 MD, Hancock Co.  
U. S. G. S. Lead Mtn., Me.

Fishes

White perch	White sucker
Yellow perch	Minnows
Chain pickerel	Fallfish
Hornpout (bullhead)	Banded killifish
Smelt	Pumpkinseed sunfish

Physical Characteristics

Area - 666 acres

Temperatures

Maximum depth - 30 feet

Surface - 74° F.

28 feet - 69° F.

Rocky Pond, as its name implies, is a shallow, rock-strewn pond located several miles south of the "Airline" (Rt. 9) in Hancock County. You can get there over an extremely rough road passable only by 4-wheel drive vehicles or trucks. It is one of the major lakes in the East Branch of the Union River drainage.

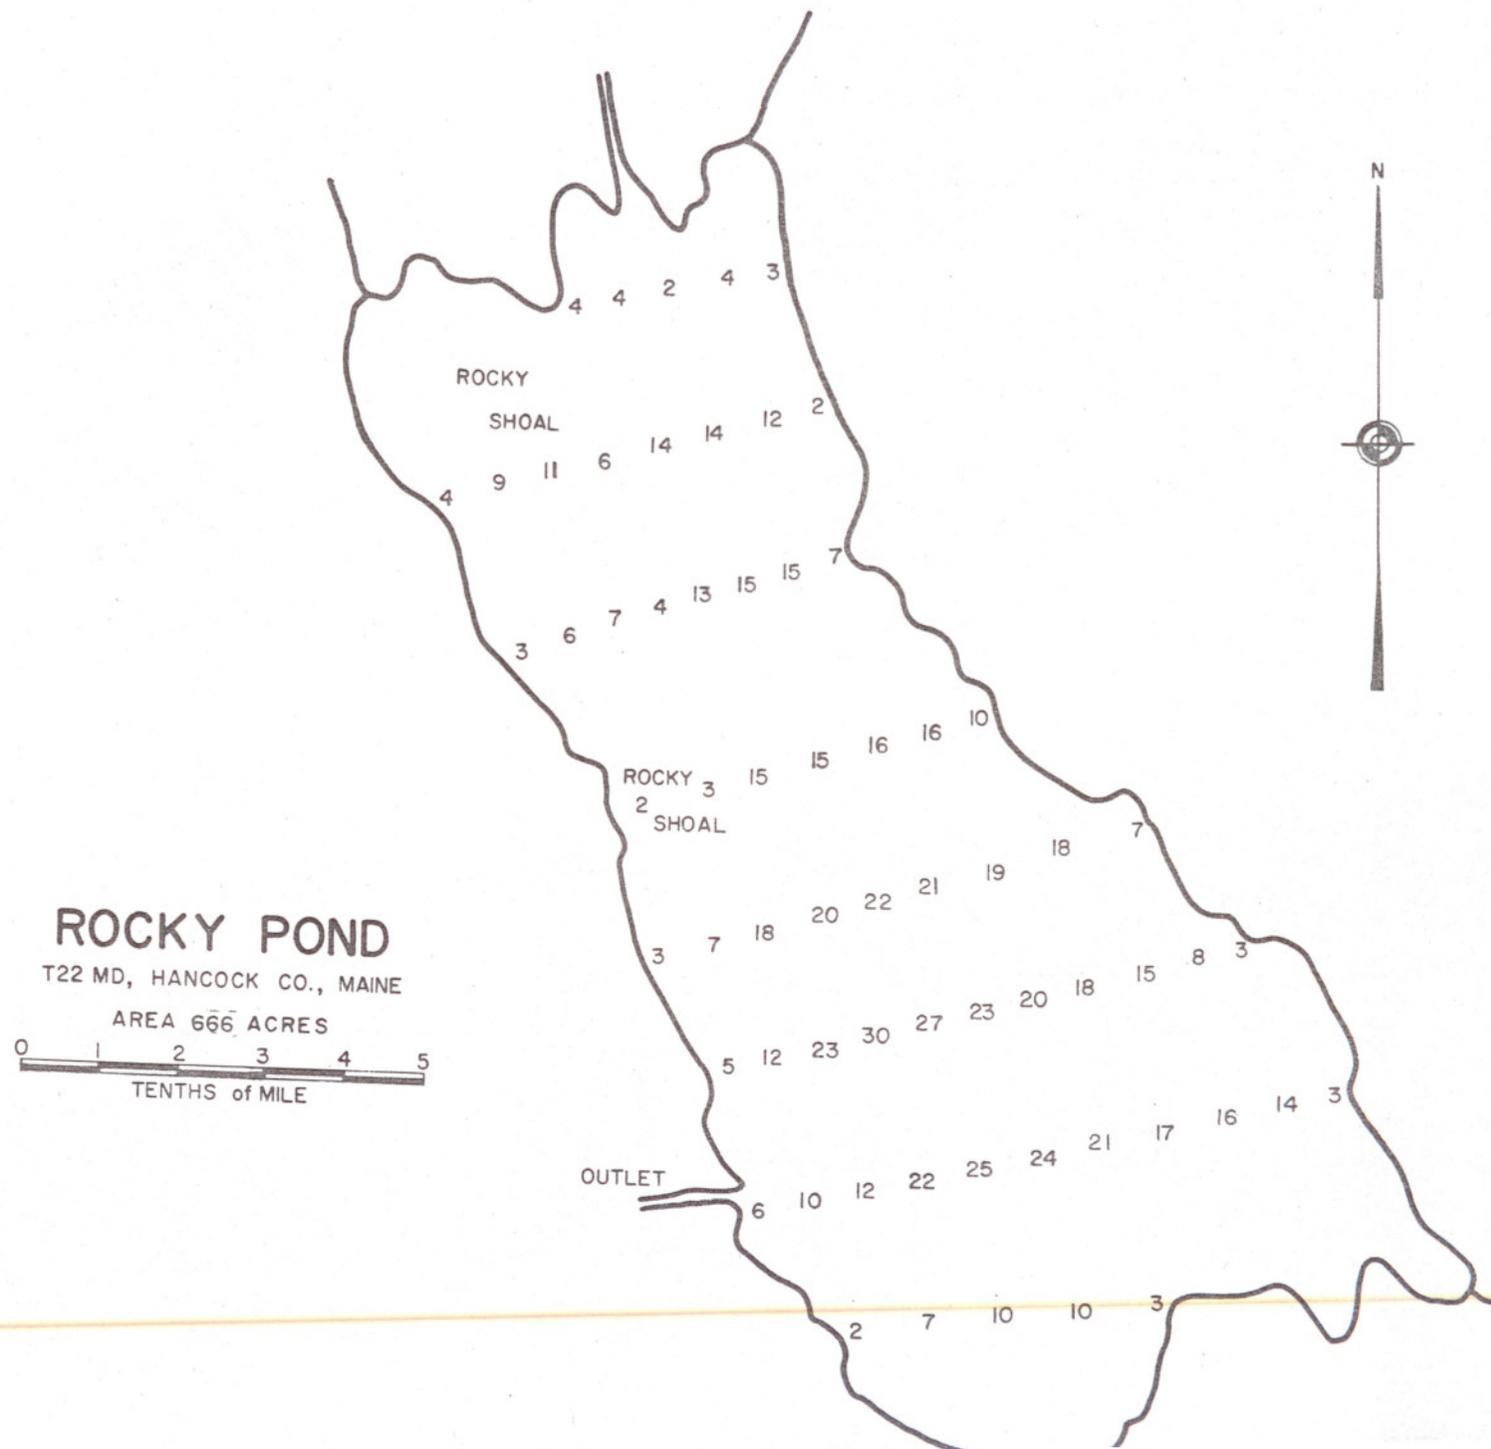

Rocky Pond is very heavily populated with white perch. Pickerel are also firmly established. We recommend management of this warm, shallow environment for these two species. Fishing pressure here is thought to be extremely light.

During cool seasons, you may catch an occasional trout that has moved in from tributaries or the outlet. You also may take an occasional salmon that has dropped down from the Lead Mountain ponds above.

We recommend no stocking of any kind.

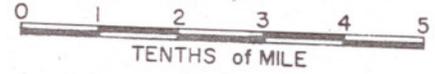

Surveyed - August, 1960
