

McCURDY POND
Bremen Twp., Lincoln Co.
U. S. G. S. Waldoboro, Me.

Fishes

Smallmouth bass	Smelt
White perch	Eel
Yellow perch	Minnows
Chain pickerel	Pumpkinseed sunfish
Hornpout (bullhead)	

Physical Characteristics

Area - 207 acres	Temperatures
	Surface - 71° F.
Maximum depth - 41 feet	38 feet - 57° F.

McCurdy Pond contains a variety of warmwater fishes. Smallmouth bass have been caught from this pond during the past two summers, but how bass were introduced here is unknown. Bass in McCurdy Pond have now spread into other waters in the Pemaquid River drainage, including Pemaquid and Biscay Ponds. These ponds contain ideal habitat for smallmouth bass, and in a few years bass fishing should contribute greatly to summer angling in all of these waters.

Oxygen is completely lacking in the colder layers of McCurdy Pond during the summer months. Management for coldwater fish is not recommended.
