Chain pickerel	American eel
Minnow species	

Physical Characteristics

Area - 193 acres Temperatures
Surface - 70° F
Maximum depth - 7 feet

Principal fisheries: Largemouth bass,
chain pickerel

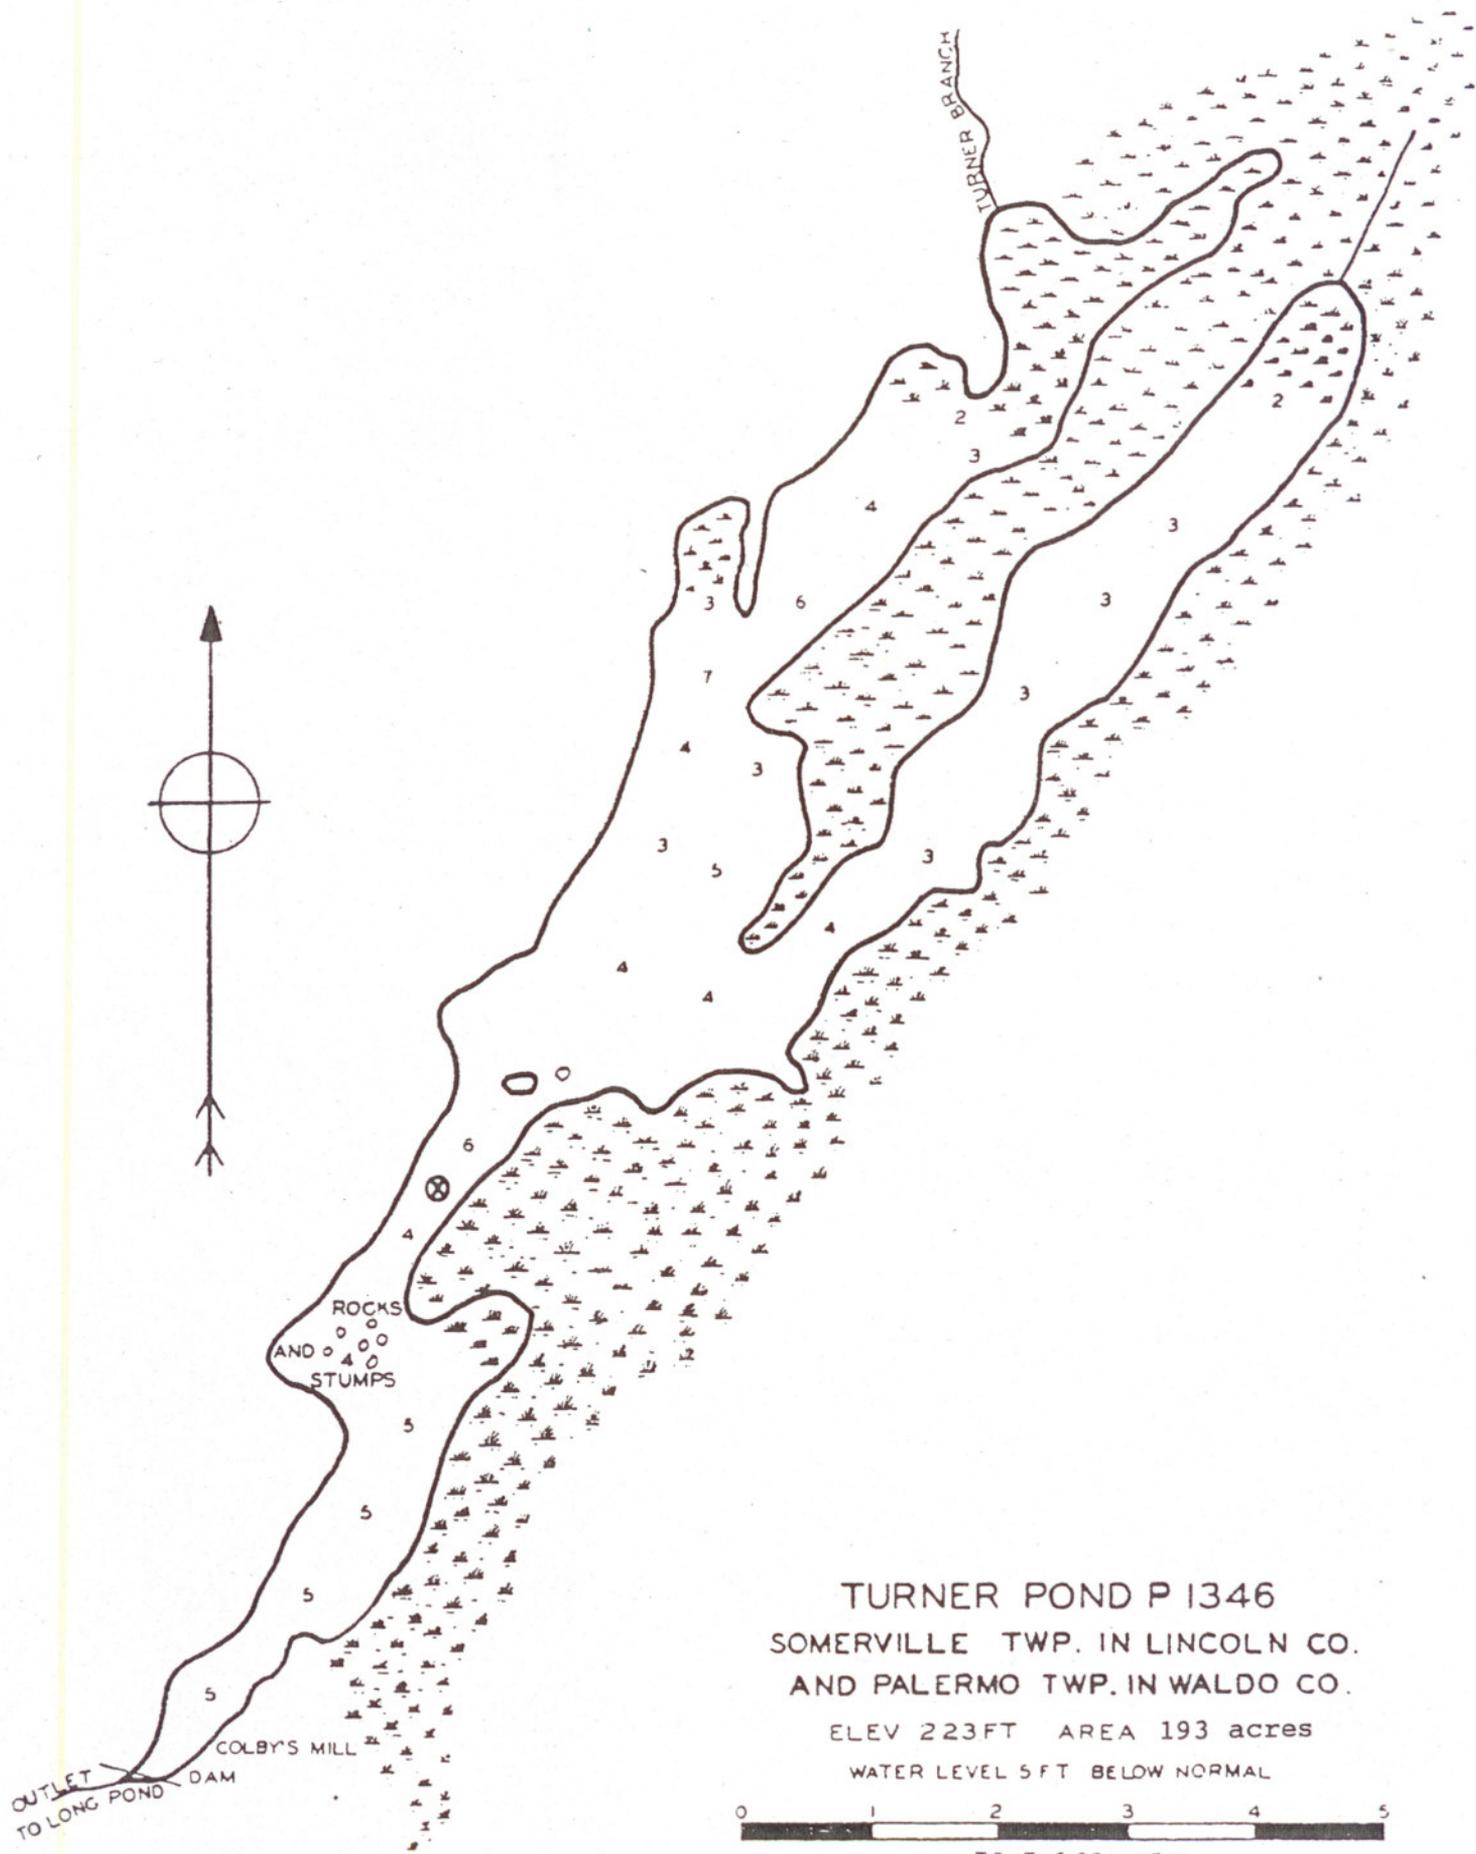

Turner Pond, which drains to Long Pond and the Sheepscot River, is a shallow, weedy body of water well suited to warmwater fisheries management. Largemouth bass were introduced by Department biologists in 1979. This species has become well established and provides an excellent fishery.

Anglers can access Turner Pond from a small landing located near the outlet stream.

Surveyed - August, 1941

(Revised - 1953, 1992) Maine Department of Inland Fisheries and Wildlife. Funded in part by Federal Aid in Fish Restoration Act under Federal Project F-28-P.
