T9R11, Piscataquis County  
U.S.G.S. Chase Lake, Me. (7½')

## **Fishes**

Brook trout  
Minnows  
Northern redbelly dace

## **Physical Characteristics**

Area – 4 acres

Temperatures:  
Surface - 73°F  
4 feet - 62°F

Maximum depth – 5 feet  
Mean depth – 2 feet

Principal fisheries: Brook trout

Third Currier Pond is one of six small ponds located in a hilly region of northern Piscataquis County. This pond is small and shallow with a silt-covered bottom and abundant aquatic vegetation. Moose frequent the pond as evidenced by numerous game trails around the shoreline.

The pond supports at least one minnow species. Brook trout were not sampled in the initial survey but a small population is likely present.

All of the Currier Ponds are managed with very conservative fishery regulations to provide a unique

angling opportunity for brook trout in a relatively remote setting.

The pond can be accessed by gravel roads maintained by private landowners for land management purposes. A footpath exists on the Southeast corner of the pond near the outlet.

Surveyed – July, 2004  
Maine Department of Inland Fisheries and Wildlife  
Funded in part by the Federal Aid in Sport Fish Restoration  
Act under Federal Project F-28-P
