NUMBER OF EMPLOYEES

STATEMENT BY FIRM Casco Bay Engineering (CBE) has been providing structural and civil engineering services to federal, state & municipal clients, architects and contractors, from our Portland, Maine office since 2003. Casco Bay Engineering's civil engineering services include civil and site design, site planning and approvals, and state and local permitting. Structural engineering services include design and analysis of structural steel, reinforced concrete, timber, masonry, and light gage metal framing in both new and existing structures. In addition to working on New Construction projects, Casco Bay Engineering has experience assessing and working with existing buildings/structures requiring renovations, structural stabilization, elimination of moisture/water intrusion, upgrades to building envelope and energy efficiency; and have specialized experience in working with structures having historic classifications. Our engineers' project experiences include industrial (manufacturing, fuel tank facilities, wastewater), commercial (office & retail complexes, restaurants, banks), municipal and private educational facilities, hospitals, recreational and cultural centers, Federal (Department of Defense & other governmental building projects), bridge analysis and design. CBE's success is based on strong technical and analytical skill, open and collaborative client-engineer communication, and professionalism.
