Mechanical engineering  
Sprinkler system design  
Structural engineering

STATEMENT BY FIRM For more than a century, Harriman has designed the buildings that represent what is important and special about communities throughout New England. An architecture and engineering firm since our founding in 1870, we recently merged with The Cecil Group to integrate urban design, planning and landscape architecture into our full suite of architecture and engineering services. Our experience is diverse and comprehensive, and our expanded studio organization offers broadened expertise in a variety of project types. Our mission is to help clients determine the best solutions to meet their needs.

Harriman and The Cecil Group are successful firms with a legacy of providing clients with thoughtful solutions through distinctive design and innovative strategies. Together we are dedicated to enhancing the built and natural environment. We apply an approach that is based on collaborative teamwork and a commitment to service — an approach verified by the number of repeat clients and an on-time, on-budget track record. Our architects, engineers, urban designers, planners and landscape architects work closely throughout all phases of a project, providing an integrated, multi-disciplinary approach that is not only cost-effective but well suited to creative solutions.

Close communications with stakeholders in a project is central to our approach. From start to completion, we emphasize open, two-way communications channels. We listen carefully, to understand client needs, missions, and values. Our experience, our expertise, and our approach result in buildings and environments that are both functionally and aesthetically appropriate, often recognized regionally and nationally for design and planning excellence.
