PRE-QUALIFIED FOR Civil engineering

STATEMENT BY FIRM S. W. Cole Engineering, Inc., established in 1979, is a team of over 90 engineers, scientists, and technicians, with four offices in Maine (Augusta, Bangor, Caribou, and Gray), two in New Hampshire and two in Vermont. We provide services on over 1,800 projects yearly including geotechnical engineering, construction materials testing and special inspections (field and laboratory), geology, hydrogeology and geoenvironmental consulting (for environmental site assessments and contamination from petroleum and hazardous waste). Our field and laboratory testing experience includes concrete, soil, steel, masonry, asphalt and special inspections. Our specialized services include pavement management, special inspections, third party erosion control inspections, environmental compliance monitoring and geothermal well consulting. S. W. Cole Explorations, LLC, a wholly-owned subsidiary of S.W.COLE, performs test boring exploration services throughout New England with our own drill rigs. S.W.COLE's 36 years of experience has allowed us to work with a wide variety of complex geologic and subsurface conditions throughout New England. We have had the opportunity to work with a varied clientele, including architectural and engineering firms, contractors, healthcare providers, educational and governmental agencies, and commercial, industrial and individual clients. Our engineers, geologists and construction materials technicians take a hands-on approach and understand the impact of subsurface conditions on construction budgets and schedules. Eight regional offices give us the ability to utilize the knowledge and experience of all our professionals with ease as well as the flexibility to schedule services in a responsive manner. As a geotechnical engineering, geosciences consulting and construction materials testing firm, S.W.COLE serves our clients' needs with a multi-disciplined staff of professional engineers and scientists as well as laboratory and field testing services. Our clients have come to rely on our professional expertise and our ability to provide project efficiency and compliance with design concepts and specifications. S.W.COLE has provided geotechnical engineering and construction materials testing, as well as geoenvironmental services, on many military, federal and state government, and municipal and public safety projects in Maine. We have provided our services on prisons and courthouses; police, fire and public safety facilities; municipal roadways, bridges and dams; state and federal park projects; military bases; airports; MaineDOT projects and other related projects.
