Environmental engineering
Fire alarm system design
Landscape architectural
Mechanical engineering
Structural engineering

STATEMENT BY FIRM Our work—professional consulting in planning, engineering, architecture, interior design, landscape architecture, surveying, environmental sciences, project management, and project economics—begins at the intersection of community, creativity, and client relationships. We’ve been providing professional design services to our local New England communities for over 60 years. Our legacy is apparent in transit, highway, and recreational facilities that improve the quality of life; in educational facilities that enrich the mind; and in buildings and monuments that inspire. We are dedicated to preserving our history and learning from our past while designing for a sustainable future. Our local strength, knowledge, and relationships, coupled with our world-class expertise, have allowed us to go anywhere to meet our clients’ needs in more creative and personalized ways. With a long-term commitment to the people and places we serve, Stantec has the unique ability to connect to projects on a personal level and advance the quality of life in communities across the globe. Community Development- Our landscape architects, civil engineers, planners, and designers create sustainable environments that are functional, innovative, and attractive. Our goal in each project is to provide social, environmental, and economic benefits in keeping with the physical site conditions, public expectations, and market realities of the project. Buildings Engineering- We focus on providing cost-effective and sustainable design solutions to engineering challenges. Power- We support the needs of our power industry clients, helping them to maximize their ROI, by delivering solutions through our people, best practices, partnerships, and technology. Environmental Management- Our team specializes in land use planning; permitting; natural resource identification in terrestrial, aquatic, and marine ecosystems; wetland analyses; eco-risk assessment; mapping; and GIS services for our clients. Environmental Remediation- Our team of scientists, geologists, and engineers help our clients reduce their environmental liabilities by developing cost-effective solutions for sites impacted by contaminated groundwater and soil.
