Dear Sir,  
I am very opposed to the corridor CMP wants to build through Maine only for the purpose of sending power to MA. They will destroy our unique wilderness and in the process of doing that, they will burn a great many trees and release CO2 into the air along with other pollutants. This will not help to slow down climate change

Hydro Quebec will not be producing more electricity, merely rerouting it to MA ,so they can get more money for it what they already produce, leaving some people without power. They may burn fossil fuels to get power. This will not help prevent climate change.

CMP will be giving Maine a small amount of money in return for the use of our land. That money will be used to increase electrification in the state. That will mean more money for CMP. Converting from burning fossil fuels to electricity would be a benefit but one has to consider how the electricity was generated. Electricity does not travel well over long distances so locally produced power would be better. CMP is not encouraging this.

Please do not let CMP take advantage of this state so that two foreign corporations can make billions of dollars while Maine only gets its wilderness ruined.

Sincerely,  
Canda Tinkelenberg  
Durham, Maine
