Little River Dam

Established 1887

October 1, 2020

To Whom It May Concern,

In regards to Nordic Aquafarms having to establish monitoring for the Goose River and Goose River Aquifer as part of its plan to construct a RAS facility in Belfast.

The Belfast Water District has been performing weekly river flow calculations on Goose River, and drawdown measurements at its two wells in the Goose River Aquifer for more then 30 years as part of regular operations. This information is public and is shared upon request.

BWD intends to continue to do that monitoring in the future and continue to make that information available to any interested party. It is our position that any additional monitoring is unnecessary and could potentially create additional work for the BWD staff and create an additional financial burden for its customers.

Sincerely,

A handwritten signature in cursive script that reads "Keith Pooler".

Keith Pooler

Superintendent of Belfast Water District
