<i>Water Depth Range</i>	0 - 8'	feet	
<i>Max Current (knots)</i>	<i>Flood</i>		<i>Ebb</i> 1.1 <i>Source</i> Estimated
<i>Nearest Boat Ramp</i>	Route 1A Odiornes Point Boat Ramp (on site)		
<i>Response Strategy Type</i>	Exclusion		
<i>Type of Boom</i>	Intertidal & Harbor Boom		
<i>Total Length of Boom</i>	200	feet	<small>Unless otherwise indicated, the boom length given is straight line distance as measured on the map. Actual length required will vary with conditions, and increase with current.</small>

Strategy Implementation

This is a 2 part exclusionary set of strategies.
Parts can be deployed alone or together as conditions/resources allow.

1. Establish communications with Command Center.
2. Use currents to assist deployment.
3. Deploy boom from boom reel or trailer at boat ramp.

Priority 1
This is a 3 piece configuration for a total of 200 feet.
In front of the Rt. 1A bridge place 100' of harbor boom with 50' of intertidal on each end.
Permanent anchors are in place on the both shores on the north side of the bridge.
Anchor point on the East side located between the bridge and the utility pole.
Anchor point on the West side located down stream of the utility pole on the west.

Priority 2
Consider protecting culvert under Brackett Road 4/10 of a mile west of the bridge at at 43 02.616 N, 70 44.053 W.

4. Observe deployment for stability and adjust as necessary.
5. Prepare to recover oil?
