Introduction

As part of the development of its certification exams, the Association of Boards of Certification (ABC) conducted a job analysis of water treatment operators during 1980 and 1981. The purpose of the job analysis was to identify the essential job tasks performed by water treatment operators and the capabilities required to competently perform these job tasks. The results of this job analysis provided ABC with the foundation for the development of valid water treatment certification exams. These exams were offered by ABC for the first time in 1982.

ABC periodically re-evaluates the need-to-know criteria to ensure it reflects current technology. Our most recent evaluation was conducted in 2006 when ABC conducted a national survey of water treatment operators. This Need-to-Know Criteria was developed from the results of the 2006 job analysis and will be used to determine the content of the ABC water treatment certification exams administered beginning in January 2008.

The information in this document reflects the essential job tasks performed by operators and their requisite capabilities. This document is intended to be used by certification programs and trainers to help prepare operators for certification in the profession.

How the Need-to-Know Criteria was Developed

Task Survey

ABC's Water Treatment Validation and Examination Committee provided technical assistance throughout the job analysis process. This committee worked with ABC staff to develop the national job task survey. 501 certified water treatment operators throughout the United States and Canada were invited to complete the survey. 173 surveys were completed for a response rate of 35%. 11% of the respondents were class I operators, 30% were class II operators, 28% were class III operators, and 31% were class IV operators.

In this survey, certified operators were asked to rate job tasks and capabilities on rating scales for frequency of performance and seriousness of inadequate or incorrect performance. These two rating scales were used because they provide useful information (i.e., how critical each task is and how frequently each task is performed) pertaining to certification. The survey also included a background information section where demographic data such as gender, age, ethnic origin, educational level attained, work experience, and certification level were collected. Space was provided at the end of the survey for operators to list any important tasks performed on their job which were not included on the survey and to make general comments.

Survey Results

The mean, standard deviation, and the percentage of respondents performing each task statement were computed. The mean was used to determine the importance of items and the standard deviation was used to identify items with a wide variation in responses. The percentage of respondents performing each task statement was used to identify tasks and capabilities commonly performed by operators throughout the United States and Canada.

A criticality value of 2(mean seriousness rating) + mean frequency rating was calculated for each item on the survey. This formula gives extra weight to the seriousness rating in determining critical items and was appropriate because it emphasized the purpose of certification—to provide competent operators.

Core Competencies

The ABC Water Treatment Validation and Examination Committee reviewed the results of the task survey to identify the most important and commonly performed job tasks and capabilities for water treatment operators. Tasks and their requisite capabilities performed by at least 50% of the respondents and with a high criticality value were designated as core competencies. They were the most important and commonly performed job tasks and capabilities.

The core competencies were considered the essential tasks and capabilities for water treatment operators. The core competencies are clustered into the following job duties:

- Monitor, Evaluate and Adjust Treatment Processes
- Laboratory Analysis
- Evaluate Characteristics of Source Water
- Comply with Drinking Water Regulations
- Operate and Maintain Equipment
- Perform Security, Safety and Administrative Procedures

The level of knowledge (i.e., comprehension, application, analysis) required for each task is also identified in the following pages.

- **Comprehension** is the most basic level of understanding and remembering. Items written at the comprehension level require examinees to recognize, remember, or identify important ideas.
- Items written at the **application** level require examinees to interpret, calculate, predict, use or apply information and solve problems.
- Items written at the **analysis** level require examinees to compare, contrast, diagnose, examine, analyze, and relate important concepts.

The level of knowledge is a hierarchy from basic comprehension to analysis. The level of knowledge tested is cumulative. Therefore, tasks identified as application may include questions written at both the application and comprehension levels. Tasks identified as analysis may include questions written at the comprehension, application and analysis levels.

Core Competencies for Water Treatment Operators

Moniton Evaluate and Adjust Treatment Dreasses	Class Level					
Monitor, Evaluate and Adjust Treatment Processes	Ι	II	III	IV		
Source Water Treatment	1	1				
Algae control	Comprehension	Application	Application	Analysis		
Chemical treatment (copper sulfate)	Comprehension	Application	Application	Analysis		
Intake structure/wellhead	Comprehension	Comprehension	Application	Analysis		
Chemical Treatment/Addition						
Taste and odor control	Comprehension	Application	Application	Analysis		
Fluoridation	Comprehension	Analysis	Analysis	Analysis

pH adjustment for process control	Comprehension	Application	Analysis	Analysis		
pH adjustment for corrosion control	Application	Application	Analysis	Analysis		
Corrosion control	Comprehension	Comprehension	Application	Analysis		
Potassium permanganate	Application	Analysis	Analysis	Analysis		
Coagulation and Flocculation	·					
Chemical coagulants	Comprehension	Application	Application	Analysis		
Rapid mix units	Comprehension	Application	Application	Analysis		
Flocculation tanks/basins	Comprehension	Application	Application	Analysis		
Clarification/Sedimentation	·					
Sedimentation basins	Comprehension	Application	Application	Analysis		
Upflow solids-contact clarification	Comprehension	Comprehension	Application	Analysis		
Inclined-plate sedimentation		Comprehension	Application	Analysis		
Tube settlers/high-rate		Comprehension	Application	Analysis		
Dissolved air flotation		Comprehension	Application	Analysis		
Other clarification/sedimentation		Comprehension	Application	Analysis		
Filtration	E					
Gravity/rapid sand filtration	Comprehension	Application	Application	Analysis		
Membrane filtration (MF, UF, NF)	Comprehension	Comprehension	Comprehension	Application		
Reverse osmosis	Comprehension	Comprehension	Application	Analysis		
Electrodialysis		Comprehension	Comprehension	Comprehension		
Cartridge filters	Comprehension	Application	Application	Application		
Slow sand filters	Comprehension	Application	Application	Analysis		
Pressure or greensand filtration	Application	Application	Application	Application		

Monitor, Evaluate and Adjust Treatment Processes	Class Level				
(continued)	I	II	III	IV	
Other Treatment Processes		•			
Aeration	Comprehension	Application	Application	Analysis	
Packed tower aeration		Comprehension	Comprehension	Comprehension	
Ion exchange softening	Comprehension	Comprehension	Comprehension	Comprehension	
Iron and manganese sequestration/removal	Application	Application	Application	Application	
Lime-soda ash softening	Comprehension	Comprehension	Application	Analysis	
Granular activated carbon		Comprehension	Comprehension	Application	
Powdered activated carbon		Comprehension	Comprehension	Application	
Coagulation aids	Comprehension	Application	Application	Analysis	
Filter aids		Application	Application	Analysis	
Backwash aids		Application	Application	Analysis	
Residuals Disposal					
Backwash water/supernatant	Comprehension	Comprehension	Application	Analysis	
Deep well injection		Comprehension	Comprehension	Comprehension	
Discharge to lagoons and then surface water		Comprehension	Comprehension	Comprehension	
Discharge to sewers	Comprehension	Comprehension	Comprehension	Comprehension	
Drying beds/evaporation ponds		Comprehension	Comprehension	Comprehension	
Land application		Comprehension	Comprehension	Comprehension	
Mechanical dewatering		Comprehension	Application	Analysis	

Job Tasks Required for Treatment Processes

- Adjust chemical feed rates
- Adjust flow patterns
- Adjust process units
- Calculate dosage rates
- Confirm chemical strength
- Diagnose/troubleshoot process units
- Measure chemical weight/volume
- Monitor and evaluate process units
- Perform basic math
- Perform physical measurements
- Perform process control calculations
- Prepare chemicals

Capabilities Required for Treatment Processes

- Ability to maintain processes in normal operating condition
- Knowledge of chemical application procedures
- Knowledge of chemical handling and storage procedures
- Knowledge of chemical properties
- Knowledge of general biology and chemistry
- Knowledge of general electrical principles
- Knowledge of hydraulic principles
- Knowledge of math concepts
- Knowledge of normal chemical range
- Knowledge of physical science
- Knowledge of principles of measurement
- Knowledge of treatment concepts and processes
- Knowledge of water treatment design parameters

Job Tasks Required for Laboratory Analysis

- Analyze samples
- Calculate results of tests
- Calibrate lab instruments
- · Check reagents
- Evaluate data
- Interpret test results
- Maintain log book
- Make reagents
- Measure and prepare chemicals
- Operate lab instruments
- Preserve, store, and ship samples
- Record samples
- Select proper test method
- Select sample locations and take samples
- Store and dispose of chemicals
- Summarize results of analysis

Capabilities Required for Laboratory Analysis

- Ability to recognize abnormal analytical results
- Knowledge of basic laboratory techniques
- Knowledge of chemical handling and storage procedures
- Knowledge of drinking water regulations
- Knowledge of general biology, chemistry and physical science
- Knowledge of laboratory equipment
- Knowledge of normal characteristics of water
- Knowledge of principles of measurement
- Knowledge of quality control/quality assurance practices
- Knowledge of sample containers
- Knowledge of sampling procedures
- Knowledge of Standard Methods for the Examination of Water and Wastewater

Evaluate Characteristics of Source Water		Class Level

Job Tasks Required to Operate and Maintain Equipment

- Calculate pump drawdown and pump efficiency
- Calibrate equipment
- Change oil/lubricate equipment
- Clean equipment
- Diagnose/troubleshoot equipment
- Evaluate and adjust equipment
- Interpret pump performance curves
- Maintain seals and bearings
- Monitor charts, meters and pressure gauges
- Perform cathodic protection
- Perform general maintenance
- Prime pumps
- Recognize potential backflow and crossconnection conditions
- Repack pumps
- Replace equipment
- Start up and shut down equipment
- Test for and repair leaks

<u>Capabilities Required to Operate and</u> <u>Maintain Equipment</u>

- Ability to differentiate between preventive and corrective maintenance
- Ability to discriminate between normal and abnormal operating conditions
- Knowledge of control systems
- Knowledge of drinking water treatment concepts
- Knowledge of facility operation and maintenance
- Knowledge of function of tools
- Knowledge of general electrical and mechanical principles
- Knowledge of hydraulic and pneumatic principles
- Knowledge of lubricant and fluid characteristics
- Knowledge of process control instrumentation

- Knowledge of risk management

ABC Water Treatment Certification Exams

The ABC water treatment certification exams evaluate an operator's knowledge of tasks related to the operation of water treatment plants. The Water Treatment V&E Committee determined the content of each exam based on the results of the national job analysis. To pass an ABC exam, an operator must demonstrate knowledge of these core competencies. Because certificates may be used to work in various treatment plants, the exams may include technologies that are not used in each treatment plant but are commonly used in many treatment plants.

Four levels of certification exams are offered by ABC, with class I being the lowest level and class IV the highest level. The specifications for the exams are based on a weighting of the job analysis results so that they reflect the criticality of tasks performed on the job. The specifications list the percentage of questions on the exam that fall under each job duty. For example, 24% of the questions on the ABC class I exam relate to the job duty "Monitor, Evaluate and Adjust Treatment Processes." For a list of tasks and capabilities associated with each job duty, please refer to the list of core competencies on the previous pages.

	Exam Level			
	Class I	Class II	Class III	Class IV
Monitor, Evaluate and Adjust Treatment Processes	24%	38%	43%	43%
Laboratory Analysis	16%	19%	16%	16%
Evaluate Characteristics of Source Water	5%	5%	5%	5%
Comply with Drinking Water Regulations	20%	15%	15%	15%
Operate and Maintain Equipment	24%	16%	15%	15%
Perform Security, Safety and Administrative Procedures	11%	7%	6%	6%
