

WESTERN DISTRICT: Chronic Diseases

Cardiovascular Disease

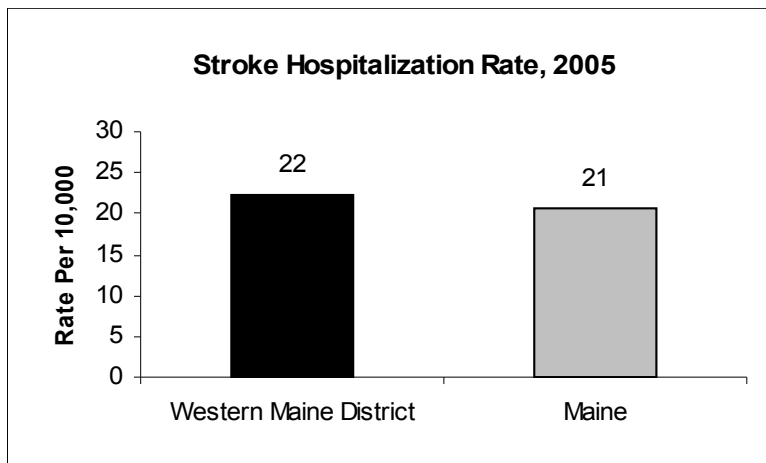

Cardiovascular disease refers to a group of diseases and conditions affecting the heart and blood vessels, and is the leading killer of adults in Maine. Heart disease, stroke, and hypertension, among other conditions, also create a vast burden of illness and need for health care in Maine.

Cardiovascular disease is not an inevitable consequence of life. Many cardiovascular diseases can be prevented or modified through basic healthy lifestyle choices. Screening and early identification of disease and those at risk of disease, and monitoring of blood pressure and cholesterol, changes in health care delivery, and policies and environments that support healthy choices can make a difference.

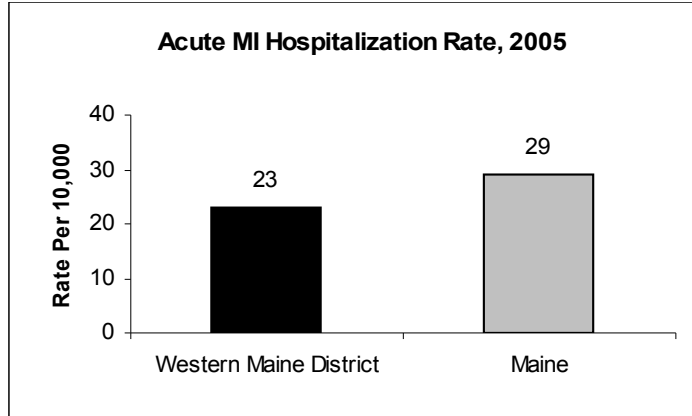

The Maine CDC's Cardiovascular Health Program and links to many partners can be found at www.maine.gov/dhhs/boh/hmp/mcvhp/.
