

## WESTERN DISTRICT:

## Chronic Diseases

### Respiratory Health

Chronic respiratory diseases include chronic obstructive pulmonary disease (COPD) and asthma, and affect approximately one in eight people in Maine. COPD is largely a result of tobacco smoke and primarily affects older adults. Asthma affects people of all ages and is increasing in Maine at a dramatic rate.

Data on chronic lower respiratory disease [includes COPD] and on asthma are collected through Maine vital records, hospital data, and state surveys.

Information on asthma can be found at Maine Asthma Control and Prevention Program at: [www.maine.gov/dhhs/bohdcfh/mat/index.html](http://www.maine.gov/dhhs/bohdcfh/mat/index.html) and its links to its many state and local partners.
