## **ACKNOWLEDGEMENTS**

The Maine-New Hampshire Inshore Trawl Survey is a complex project that benefits from the assistance of many people. Without their help the surveys could not be successfully completed.

We would like to thank the Maine DMR and New Hampshire F&G staff that helped with the mailings, car shuttles, and contributed to the data collection and entry. We appreciate the hard work put in by the crew of the F/V Robert Michael, Captain Curt Rice and Captain Robert Tetrault II, and crewmembers Robert Woodward and Jerry Balzano. Jeff Flagg provided invaluable assistance by mending and transporting nets to keep the survey running on schedule, and storing gear during the off-season.

Thanks to science crewmembers, Trisha deGraaf, Tim Bennett, Cullen Wilson, Jessica Fisher, Kevin Sullivan, Rob Royer, Ryan MacDonnell, and Kim Trull. Special thanks to fishermen observers Steve Train, Adam Joy, Linda Lunt and Jason Joyce. We are especially grateful for the support provided by Colonel Joe Fessenden, Lieutenants Jon Cornish and Alan Talbot, and some 20 Marine Patrol Officers who helped both on and off the water, handling gear, helping to communicate with lobstermen, and whose presence added to our security.

We also express many thanks to all of the facilities along the coast that provided dockage for the survey vessels: Wentworth by the Sea (Portsmouth, NH), Journey's End Marina (Rockland, ME), Vinalhaven Public Pier, Billings Marine (Stonington, ME), Great Harbor Marine (Southwest Harbor, ME) and the US Coast Guard (Jonesport, ME).

Once again, we are grateful to NOAA National Weather Service's James Mansfield and Mark Turner for broadcasting our schedule to mariners to avoid gear conflicts and address the communications concerns raised by fixed gear fishermen.

Lastly, we appreciate the support and cooperation of those fixed gear fishermen throughout the survey area that moved gear and suggested alternate sites when necessary. The Lobster Zone Councils, Maine Lobster Advisory Council, Maine Lobstermen's Association, and Downeast Lobstermen's Association also provided many comments and suggestions to help minimize gear conflicts and improve cooperation.

## **EXECUTIVE SUMMARY**

This report summarizes results from the 2007 sampling season of a comprehensive bottom trawl survey of groundfish and invertebrate species along the coast of Maine and New Hampshire. Prior to 2000, fishery-independent data had been absent for nearly 80% of the inshore Gulf of Maine's inshore waters. The Maine-New Hampshire Inshore Trawl Survey was initiated to fill the information gap and collect valuable information on the fish and biological communities in this area and establish a time series for long-term monitoring of inshore stocks. The survey has a stratified random design similar to the National Marine Fisheries Service's Gulf of Maine survey and the Massachusetts Division of Marine Fisheries inshore survey, with an additional fixed station subset. Using a specially designed net and a commercial fishing vessel, the survey has proven to be a successful example of fishermen and scientists working together to benefit fisheries management. Two annual surveys are conducted, fall and spring, to create a rich database on fish and invertebrate species that is accessible to fishery managers, academic researchers, fishing industry members, graduate students, non-governmental organizations, and the general public. With seven complete years and an eighth underway, clear patterns of distribution and abundance have emerged for many species. Information from the survey is used in the assessment and management of several fisheries, and additional requests for and uses of these data have provided new insight into communities and populations in the Gulf of Maine.

## **INTRODUCTION**

Initiated in the fall of 2000, the Maine-New Hampshire Inshore Trawl Survey is a collaborative partnership between commercial fishermen and state researchers to assess inshore fish stocks along the Maine and New Hampshire coasts. The survey has completed seven years of biannual survey work, and the eighth year is now underway. From its inception, the project has been supported by federal funds appropriated to the National Marine Fisheries Service to foster cooperative research using commercial vessels. Collaborative research enables fishermen to contribute their knowledge and experience toward the progress of scientific data collection and ultimately to resource management decisions, and strengthens the trust between fishermen and scientists, increasing the confidence fishermen have in the data.

Fishery-independent trawl surveys help to provide an index of the distribution and abundance of a variety of fish and invertebrate species that is not influenced or biased by fishing effort or outside factors. As they continue on an annual basis, these surveys should reflect changes in abundances of populations more accurately than commercial fisheries catch statistics. Abundance indices derived from research trawl surveys that maintain consistent and standardized efforts can be utilized to enhance catch statistic based assessments and with additional research efforts could eventually provide population abundance estimates.

Surveying the inshore waters of the Maine and New Hampshire coasts has been difficult due to a complex bottom consisting of ledges, canyons, seamounts and boulders, amplified by an abundance of lobster gear. The survey has seen an average success rate of 95% in the spring and 71% in the fall. Dealing with the large quantity of fixed gear, especially in the fall, still limits the number of tows that can be made, but continual and extensive public outreach has maintained a satisfactory level of tow completion. Despite the difficulties, the coverage this survey provides promises to be very valuable to better understanding marine ecosystems in the Gulf of Maine. We are confident that the northern Gulf of Maine can be successfully and consistently sampled via trawl survey indefinitely, with sustained funding.

### **Project Objectives:**

The overall goal of this project is to establish a solid foundation for a long-term fishery-independent monitoring program in Maine and New Hampshire's inshore waters (5-80<sup>+</sup> fathoms).

Specific objectives are:

- To document the distribution and relative abundance of marine resources in the nearshore Gulf of Maine.
- To improve survey logistics to gain cooperation of the fixed gear fishermen.
- To develop recruitment indices for assessments of target species.
- To involve fishermen in scientific data collection.
- To collect environmental data, including temperature and salinity that can affect fish distribution.
- To gather information on biological parameters (growth rates and reproduction).

## **MATERIALS AND METHODS**

Methods are described under separate cover in “Maine-New Hampshire Inshore Groundfish Trawl Survey Procedures and Protocols (2005),” available on-line at <http://www.maine.gov/dmr/rm/trawl/trawl.htm>. The manual includes detailed descriptions of survey design, station selection, survey vessels, net design, public notification, sample collection and catch handling, and other information on survey methods and operations.

## **RESULTS**

### **SPRING 2007 SUMMARY**

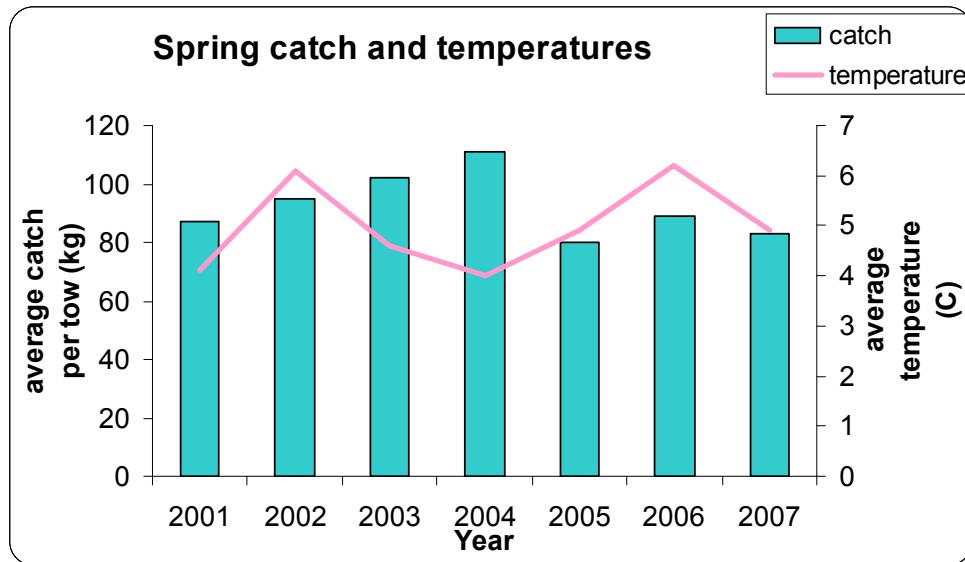

The spring survey began on May 7, 2007 in Portsmouth, New Hampshire and finished on June 9th. Of the 115 targeted tows, 108 total tows were completed for a success rate of 94%. Average bottom temperatures by stratum ranged from 3.7 to 6.6 °C, with an average of 4.9 °C for the whole survey (Table 1).

**Table 1. Average Bottom Temperature (°C) for the Spring 2007 Survey**

		Region				
Stratum		1	2	3	4	5
	1	4.2	5.8	5.2	6.6	6.3
	2	3.8	4.3	5.3	4.9	5.7
	3	3.9	3.9	5.0	4.8	5.4
	4	4.1	3.9	4.4	5.1	6.2

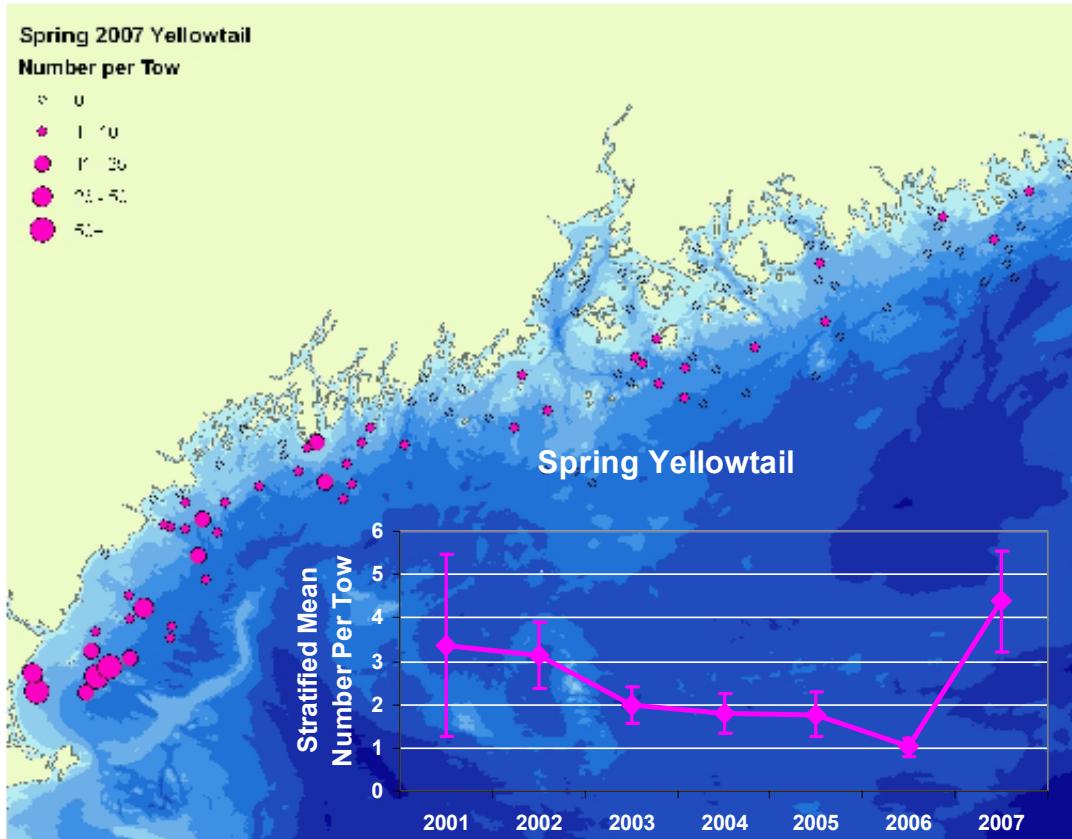

The volume of total mixed catch varied from 8 kg to 843 kg per tow, with an average of 83 kg and a median of 56 kg per tow. The average catch per tow for this survey was similar to that of the past few years, but overall one of the lesser springs catches (Fig. 1). The total number of species caught was 87, with a low of 8 and high of 35 in any particular tow, and an average of 22 species. A complete listing of tow locations, coordinates, dates, times, and depths can be found in Appendix A.

**Figure 1. Average catch per tow and average overall temperature for all spring surveys.**

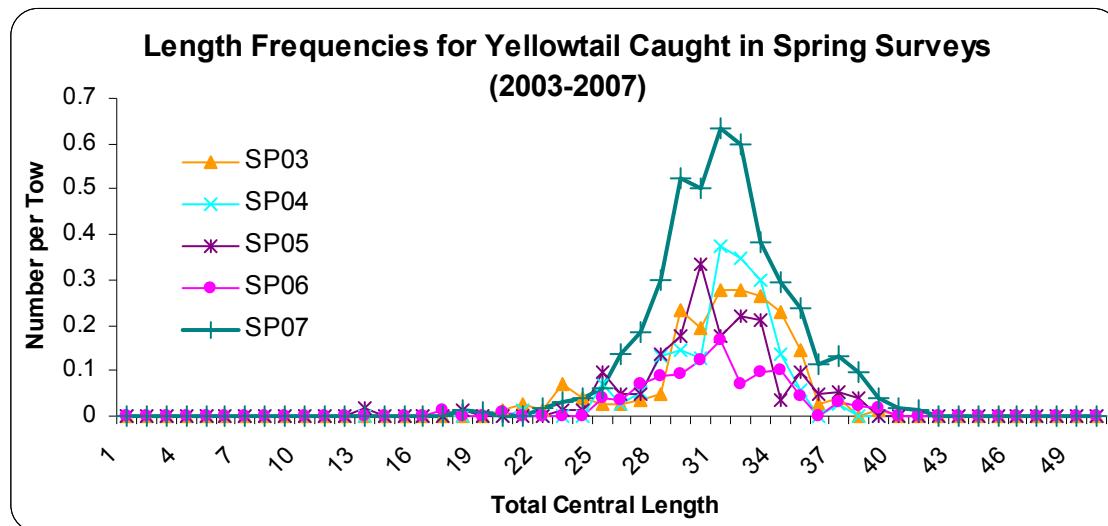

One highlight of the Spring 2007 survey were the catches of yellowtail flounder, which were higher than any previous year across the whole survey area, but especially from New Hampshire to Midcoast Maine (Fig. 2).

**Figure 2. Plot of yellowtail flounder (number per tow) caught in the spring 2007 survey, with an overlay of stratified means for yellowtail in all spring surveys.**

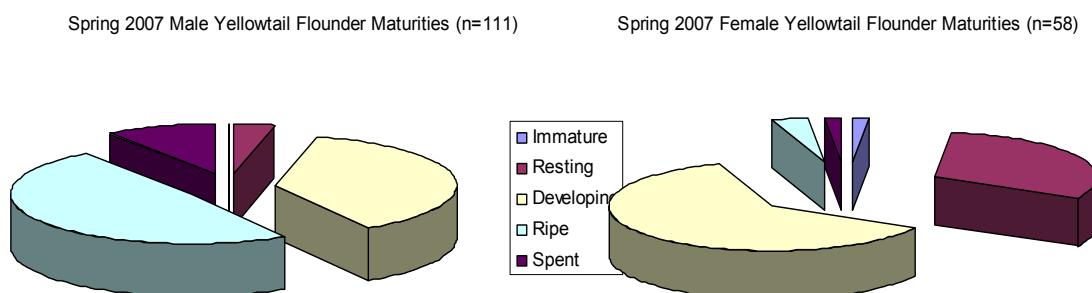

Over 75% of the total yellowtail caught were under the legal commercial size of 33 centimeters (Fig. 3).

**Figure 3. Yellowtail flounder length frequencies (stratified number per tow) for the past 5 years of spring surveys (2003-2007).**

Biological data was collected on almost one-third of the yellowtail flounder caught. Of the 169 individuals examined, two-thirds were male and one-third were female. Nearly half of the males examined were ripe, while majority of the females were still developing (Fig. 4).

**Figure 4. Proportion of yellowtail flounder maturities by sex for 2007 spring survey.**

## FALL 2007 SUMMARY

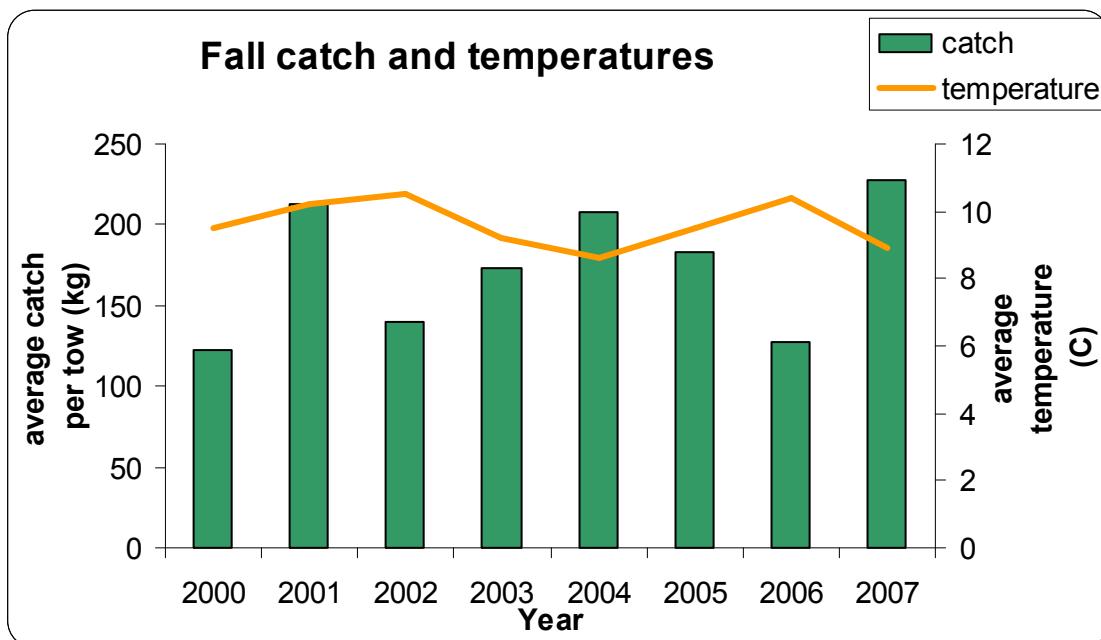

The fall survey began on October 1, 2007 along the coast of New Hampshire. Of the 115 targeted tows, 87 total tows were completed for a success rate of 76%, one of the higher success rates for a fall survey. Average bottom temperatures by stratum ranged from 6.1 to 11.9 °C, with an average of 8.9 °C for the whole survey (Table 2).

**Table 2. Average Bottom Temperature (°C) for the Fall 2007 Survey**

		Region				
Stratum		1	2	3	4	5
	1	9.7	11.9	11.8	11.4	10.2
	2	8.3	9.0	11.0	10.2	9.6
	3	6.3	8.0	9.7	9.0	9.3
	4	6.1	6.6	8.2	7.9	8.1

The volume of total mixed catch varied from 25 kg to 1493 kg per tow, with an average of 228 kg and a median of 158 kg per tow (Fig. 5). The average catch per tow was one of the higher ones for a fall survey. The total number of species caught was 95, with a low of 16 and high of 37 in any particular tow, and an average of 24 species.

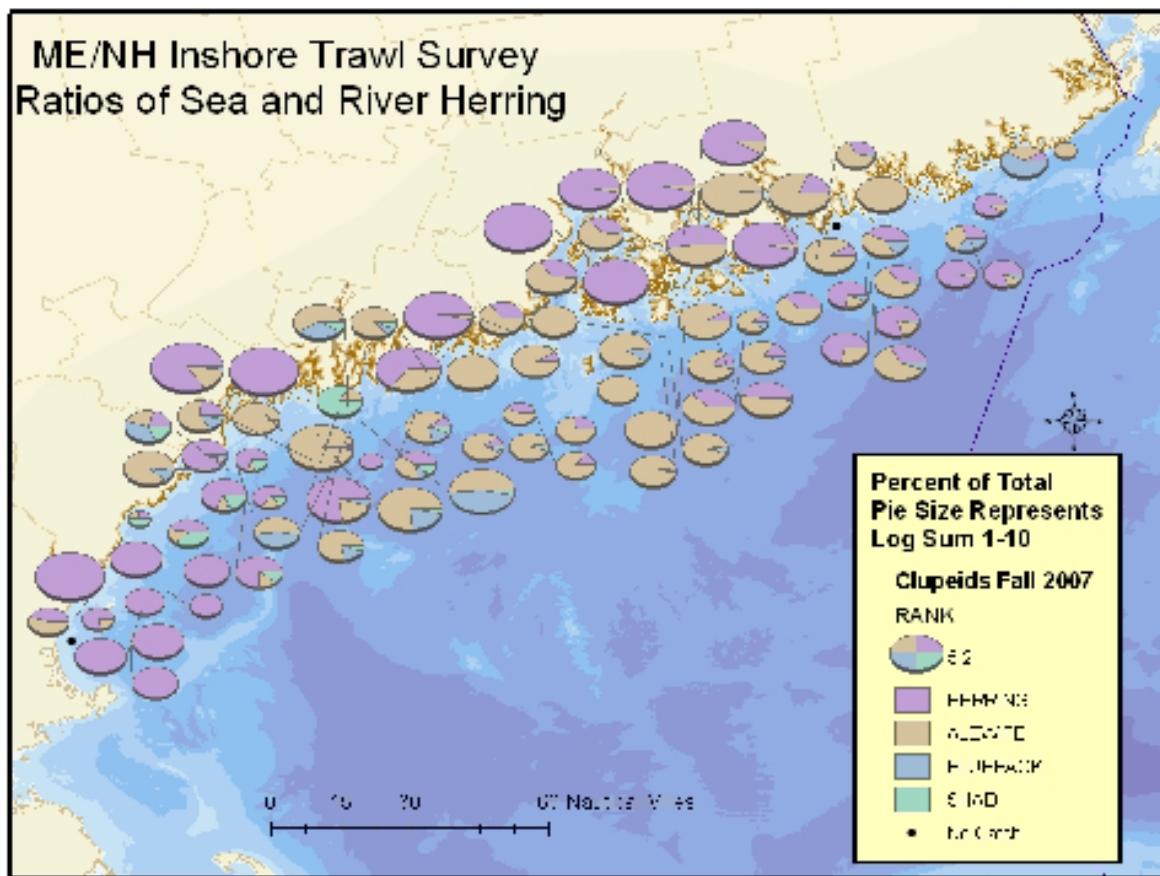

**Figure 5. Average catch per tow and average overall temperature for all fall surveys.**

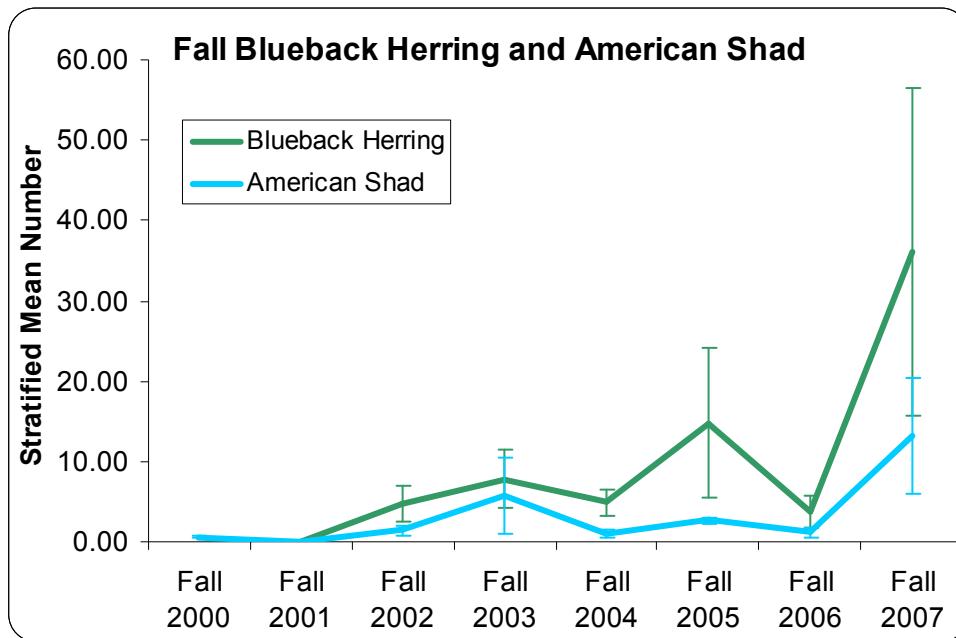

Unusual occurrences included Atlantic saury, *Scomberesox saurus*, which was seen for the first time in the trawl survey. Two individuals, 22 and 23 centimeters in length, were caught at Old Jeffreys. One 9-cm mackerel scad, *Decapterus macarellus*, was caught off of the Goose Islands in Middle Bay. Two bobtail squid, not seen since Spring 2001, were caught in two separate tows, at Inner Schoodic Ridge and Hake Ground. Also of note, 31 juvenile Atlantic halibut, *Hippoglossus hippoglossus*, ranging from 11 to 14 centimeters in length, were caught in a tow off of Cape Elizabeth.

Clupeids were especially abundant during the Fall 2007 survey. Out of the 87 total tows completed in Fall 2007, there were only two tows where clupeids were not present. Figure 6 shows the proportion of clupeids caught in the fall 2007 tows. In addition, catches of American shad and blueback herring were the highest for any fall survey (Figure 7).

**Figure 6.** Shown are percentages of clupeid species by station for the fall 2007 survey. Data was log-transformed.

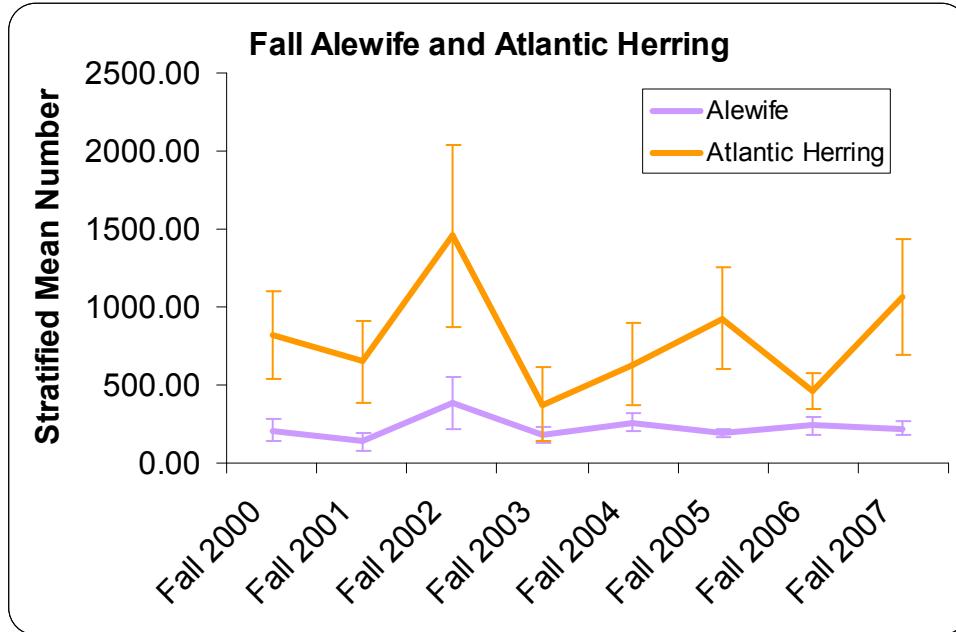

**Figure 7. Stratified mean number of blueback herring and American shad in fall surveys.**  
**No blueback data is available for the Fall 2000 survey as they were not separated from the catch**

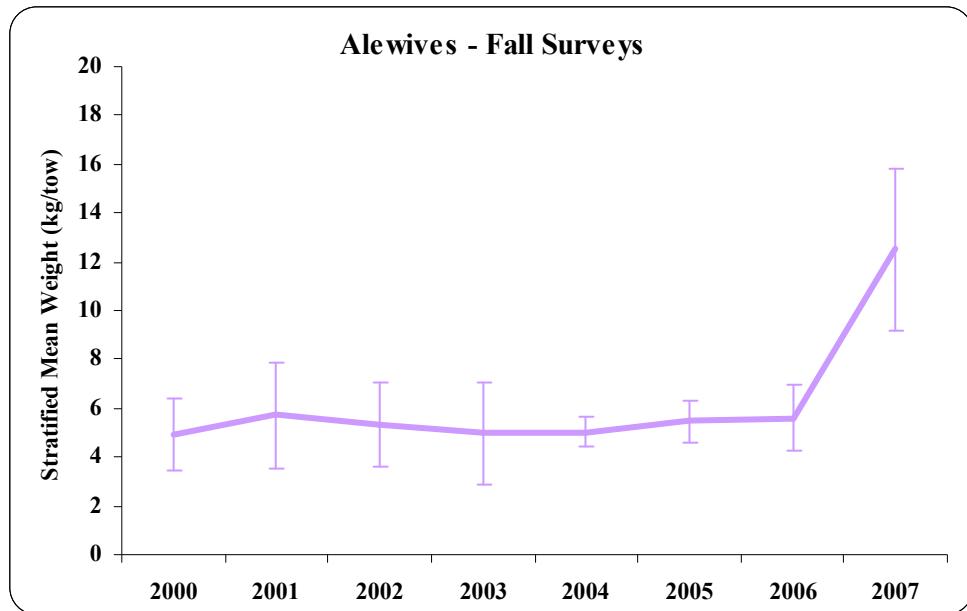

Atlantic herring numbers were also up in the Fall 2007 survey, and at their highest levels since the Fall 2002 survey (Fig. 8). And while the numbers of alewives caught in the fall have remained fairly consistent over the years (Fig. 8), the weight increased drastically for the fall 2007 survey (Fig. 9) when a significantly greater number of larger fish were caught (Fig. 10).

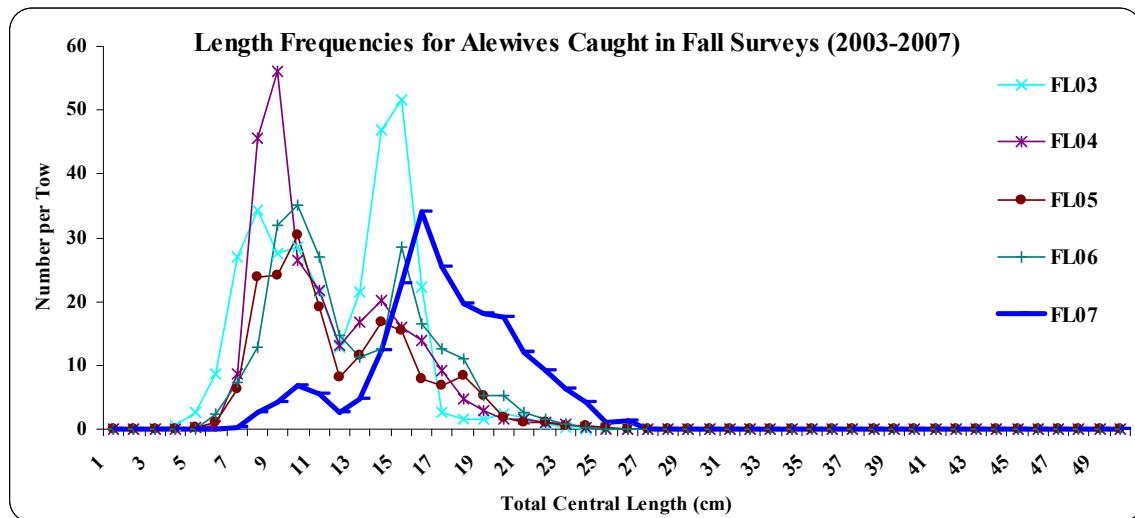

**Figure 8. Stratified mean number of alewife and Atlantic herring in fall surveys.**

**Figure 9. Stratified mean weight for alewives in fall surveys.**

**Figure 10. Alewife length frequencies (stratified number per tow) for the past 5 years of fall surveys (2003-2007).**

## HIGHLIGHTS

The following pages represent highlights for selected species.

Spring 2007 and Fall 2007 Stratified Catch At Length for Selected Species

## **PARTNERSHIPS**

The fisherman-scientist partnership during this project has been consistently strong. Foremost is the partnership between the scientific staff and commercial boat crews. The commercial crew of the F/V Robert Michael has proven to be completely dedicated to this project. Not only did the crew operate the boat and handle the gear, they have become equal partners in solving problems related to gear conflicts, communications, scheduling and logistics. Their participation involves far more than boat operations and gear handling, including sorting the catch, weighing and measuring samples, and collecting biological specimens including otoliths. Their involvement has resulted in significant improvements to survey efficiency while we adhere to standard protocols.

The fall 2007 survey marked the beginning of a change in captain and crew, as Captain Curt Rice and crewman Jerry Balzano are leaving the survey after this year. Curt has worked with us since the inception of the survey in 2000 and Jerry since 2002. We would like to thank them for all their help and wish them well in the future.

Captain Robert Tetrault II completed the fall 2007 survey with us. Both he and Curt worked together for the full five weeks to insure a smooth transition. We begin in the spring of 2008 with a new captain and crew.

## **SPECIAL PROJECT: GEAR MANUAL**

On June 10, 2008, the trawl survey staff and the net manufacturer met staff from the Marine Institute at the Memorial University in Newfoundland to obtain detailed weights and dimensions of the trawl net and its various components. These measurements were then compiled into a comprehensive gear manual (Appendix C) prepared by the Marine Institute at the Centre for Sustainable Aquatic Resources at Memorial University, St. Johns, Newfoundland.

## **SPECIAL PROJECT: MICROSCOPE AND DIGITAL CAMERA**

Part of the trawl survey grant was apportioned to purchasing an Olympus SZ6145TR Microscope and an Olympus DP71 Digital Camera. This equipment was installed in July of 2008, and will be used in all future age estimations. To date, the trawl survey has a large backlog of otoliths and this equipment will aid in the processing of the archived samples.

## Appendix B

### Taxa List

The following is a list of taxa we have encountered in all surveys conducted since 2000.

#### **Finfish**

##### Flatfish

American plaice	<i>Hippoglossoides platessoides</i>
Atlantic halibut	<i>Hippoglossus hippoglossus</i>
Four-spot flounder	<i>Paralichthys oblongus</i>
Greenland halibut	<i>Reinhardtius hippoglossoides</i>
Gulf Stream flounder	<i>Citharichthys arctifrons</i>
Summer flounder	<i>Paralichthys dentatus</i>
Windowpane	<i>Scophthalmus aquosus</i>
Winter flounder	<i>Pseudopleuronectes americanus</i>
Witch flounder	<i>Glyptocephalus cynoglossus</i>
Yellowtail flounder	<i>Limanda ferruginea</i>

##### Gadids

Atlantic cod	<i>Gadus morhua</i>
Cusk	<i>Brosme brosme</i>
Four-beard rockling	<i>Enchelyopus cimbricus</i>
Haddock	<i>Melanogrammus aeglefinus</i>
Pollock	<i>Pollachius virens</i>
Red hake	<i>Urophycis chuss</i>
Silver hake	<i>Merluccius bilinearis</i>
Spotted hake	<i>Urophycis regia</i>
White hake	<i>Urophycis tenuis</i>

##### Other Benthics

Acadian redfish	<i>Sebastes fasciatus</i>
Alligatorfish	<i>Aspidophoroides monopterygius</i>
American eel	<i>Anguilla rostrata</i>
American sand lance	<i>Ammodytes americanus</i>
Armored Searobin	<i>Peristedion miniatum</i>
Atlantic hagfish	<i>Mxyine glutinosa</i>
Atlantic silverside	<i>Menidia menidia</i>
Atlantic tomcod	<i>Microgadus tomcod</i>
Atlantic torpedo	<i>Torpedo nobiliana</i>
Atlantic wolffish	<i>Anarhicas lupus</i>
Barndoor skate	<i>Raja laevis</i>
Clearnose Skate	<i>Raja eglanteria</i>
Black sea bass	<i>Centropristes striata</i>

## Appendix B Taxa List

Cunner	<i>Tautogolabrus adspersus</i>
Daubed shanny	<i>Lumpenus maculatus</i>
Gelationous seasnail	<i>Liparis fabricii</i>
Goosefish	<i>Lophius americanus</i>
Grubby	<i>Myoxocephalus aenaeus</i>
Gulf seasnail	<i>Liparis coheni</i>
Inquiline snailfish	<i>Liparis inquelinus</i>
Little skate	<i>Raja erinacea</i>
Longhorn sculpin	<i>Myoxocephalus octodecemspinosus</i>
Lumpfish	<i>Cyclopterus lumpus</i>
Moustache sculpin	<i>Triglops murrayi</i>
Northern searobin	<i>Prionotus carolinus</i>
Northern pipefish	<i>Syngnathus fuscus</i>
Ocean pout	<i>Macrozoarces americanus</i>
Pearlsides	<i>Maurolicus muelleri</i>
Radiated shanny	<i>Ulvaria subbifurcata</i>
Rock gunnel	<i>Pholis gunnellus</i>
Sea Lamprey	<i>Petromyzon marinus</i>
Sea raven	<i>Hemitripterus americanus</i>
Seasnail	<i>Liparis atlanticus</i>
Shorthorn sculpin	<i>Myoxocephalus scorpius</i>
Slender snipe eel	<i>Nemichthys scolopaceus</i>
Smooth skate	<i>Raja senta</i>
Snakeblenny	<i>Lumpenus lumpretaeformis</i>
Spiny dogfish	<i>Squalus acanthias</i>
Striped seasnail	<i>Liparis liparis</i>
Sturgeon	<i>Acipenser spp.</i>
Thorny skate	<i>Raja radiata</i>
Three-spine stickleback	<i>Gasterosteus aculeatus</i>
Winter skate	<i>Raja ocellata</i>
Wolf eelpout	<i>Lycenchelys verrillii</i>
Wrymouth	<i>Cryptacanthodes maculatus</i>

### Pelagics

Alewife	<i>Alosa pseudoharengus</i>
American shad	<i>Alosa sapidissima</i>
Atlantic herring	<i>Clupea harengus</i>
Atlantic mackerel	<i>Scomber scombrus</i>
Atlantic menhaden	<i>Brevoortia tyrannus</i>
Atlantic moonfish	<i>Vomer setapinnis</i>
Barracudina sp.	<i>Paralepididae spp.</i>
Bigeye scad	<i>Selar crumenopthalmus</i>

## Appendix B Taxa List

Bluefish	<i>Pomatomas saltatrix</i>
Blueback herring	<i>Alosa aestivalis</i>
Buckler dory	<i>Zenopsis conchifera</i>
Butterfish	<i>Peprilus triacanthus</i>
Capelin	<i>Mallotus villosus</i>
Rainbow smelt	<i>Osmerus mordax</i>
Rough scad	<i>Trachurus lathami</i>
Round scad	<i>Decapterus punctatus</i>
Scup	<i>Stenotomas chrysops</i>
Short Bigeye	<i>Pristigenys alta</i>
Silver anchovy	<i>Engraulis eurystole</i>
Striped anchovy	<i>Anchoa hepsetus</i>
Striped bass	<i>Morone saxatilis</i>

### Invertebrates

#### Crustaceans

Aesop shrimp	<i>Pandalus montagui</i>
American lobster	<i>Homarus americanus</i>
Arctic eualid	<i>Eaulus fabricii</i>
Bristled longbeak	<i>Dichelopandalus leptocerus</i>
Green crab	<i>Carcinus maenus</i>
Hermit crab (unclass.)	<i>Diogenidae/Paguridae spp</i>
Jonah crab	<i>Cancer borealis</i>
Krill	<i>Euphausid spp.</i>
Lobster shrimp	<i>Axius serratus</i>
Mantis shrimp	<i>Stomatopod sp.</i>
Northern shrimp	<i>Pandalus borealis</i>
Northern stone crab	<i>Lithodes sp.</i>
Norwegian shrimp	<i>Pontophilus norvegicus</i>
Parrot shrimp	<i>Spirontocaris spinus</i>
Pink glass shrimp	<i>Pasiphaea multidentata</i>
Polar lebbeid	<i>Lebbeus polaris</i>
Propinquus	<i>Pandalus propinquus</i>
Red crab	<i>Geryon quinquedens</i>
Rock crab	<i>Cancer irroratus</i>
Sevenspine bay shrimp	<i>Crangon septemspinosa</i>
Snow crab	<i>Chionectes opilio</i>
Spider crab (unclass.)	<i>Majidae spp.</i>
Spiny lebbeid	<i>Lebbeus groenlandicus</i>
Toad crab	<i>Hyas araneus</i>

## Appendix B Taxa List

### Molluscs

Ax head clam	<i>Yoldia thraciaeformis</i>
Blue mussel	<i>Mytilus edulis</i>
False quahog	<i>Pitar morrhuanus</i>
Horse mussel	<i>Modiolus modiolus</i>
Iceland scallop	<i>Chlamys islandica</i>
Longfin squid	<i>Loligo pealei</i>
Northern cardita	<i>Venerocardia borealis</i>
Ocean quahog	<i>Arctica islandica</i>
Octopus (unclass.)	<i>Cephalopoda spp.</i>
Quahog	<i>Mercenaria mercenaria</i>
Sea scallop	<i>Placopecten magellanicus</i>
Shortfin squid	<i>Illex illecebrosus</i>
Squid (unclass.)	<i>Rossia spp.</i>
Stimpson's whelk	<i>Colus stimpsoni</i>
Ten-Ridged whelk	<i>Neptunea decemcostata</i>
Waved astarte	<i>Astarte undata</i>
Waved whelk	<i>Buccinum undatum</i>

### Others

Anemone	various species
Barnacle	various species
Boreal asterias	<i>Asterias vulgaris</i>
Rat-tail cucumber	<i>Caudina arenata</i>
Sand dollar	<i>Echinoidae sp.</i>
Sea cucumber	<i>Cucumaria frondosa</i>
Sea sponges	various species
Sea urchin	<i>Strongylocentrotus droebachiensis</i>
Starfish (unclass.)	various species
