

## SCHOOL NURSE N95 FIT TESTING CADRE

The following nurses have agreed to provide fit testing for school nurses and other support staff who are identified as workers that may require the use of respiratory protective equipment. That is to say they are in performing or present during aerosol generating procedures such as nebulizer treatments, chest PT, suctioning, trach care or for staff caring for a student identified at school with COVID-19 symptoms in the isolation room during on-site learning days in your district. As they are able they will provide this service to other school units within their geographic area (within approximately 50 miles).

Before a school provides N95 or other respirators to staff there are steps that must be taken:

- A [Respiratory Protection Program \(RPP\)](#) is written in compliance with the Maine Board of Occupational Safety and Health's adoption of [OSHA 29 CFR 1910.134](#), Respiratory Protection Standard;
- Designated employees whose work activities may require the use of respiratory protective equipment;
- Medical clearance for the designated nursing professionals that will be participating in this NG effort in accordance with Maine Board of Occupational Safety and Health.

If you need assistance with fit testing please reach out to the cadre member nearest to you.
