Hornpout (bullhead)  
American eel

## Physical Characteristics

Area - 31 acres

Maximum depth - 16 feet

Temperature

Surface - 81°F

14 feet - 67°F

Principal fisheries: Smallmouth bass, yellow perch, chain pickerel

Berry Pond is a shallow body of water located north of Lewiston. The shoreline is lightly developed, and the pond provides the feeling of a remote angling experience.

Water quality for coldwater fisheries is absent and this pond is best suited for warmwater fisheries management. The rocky, gravelly shoreline provides adequate habitat for smallmouth bass and the fishing is good. Yellow perch and pickerel provide additional angling opportunities.

Access to Berry Pond is limited to permissive trespass over private property.

Surveyed - July 1961
