

LONG POND

Livermore Twp., Androscoggin Co.
U.S.G.S. Livermore Falls, Me. (7.5')

Fishes

Brown trout	Minnows
Brook trout	Golden shiner
Smallmouth bass	Fallfish (chub)
White perch	White sucker
Yellow perch	Hornpout (bullhead)
Northern pike	Pumpkinseed sunfish
Chain pickerel	American eel

Physical Characteristics

Area - 208 acres Temperatures:
Maximum depth - 18 feet Surface - 75°F
18 feet - 75°F
Principal fisheries: Brown trout, smallmouth bass, white perch, chain pickerel

Long Pond is a shallow body of water that drains directly to the Androscoggin River. Long Pond provides very good habitat for warmwater sportfish species such as smallmouth bass and white perch.

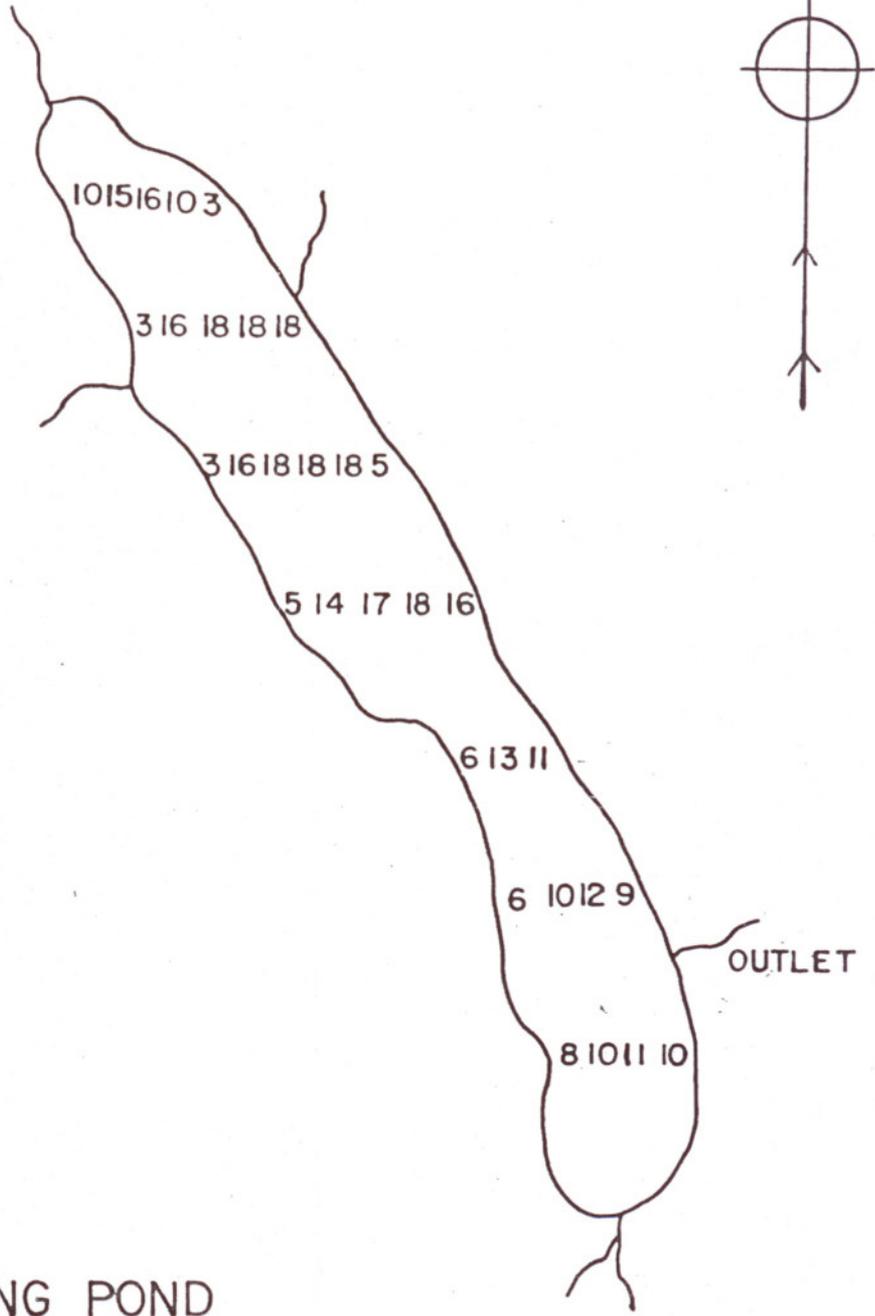

Coldwater sportfish stocking resumed when a town owned boat launch facility was constructed in 2003. Annual stockings of brown trout are necessary to maintain a good fishery since there is limited spawning and nursery habitat available in the pond or tributaries.

Brook trout have also recently been stocked. Brook trout are not expected to survive through the hot summer months, but due to the recent expansion of the Department's fish hatcheries, an experimental program was initiated. If returns of brook trout to anglers is acceptable the program will be continued.

The State owned improved boat launch facility is located along the west shore off State Route 4 in Livermore Falls.
