Minnows (Cont'd)
Finescale dace
Banded killifish

Physical Characteristics

Area - 45 acres

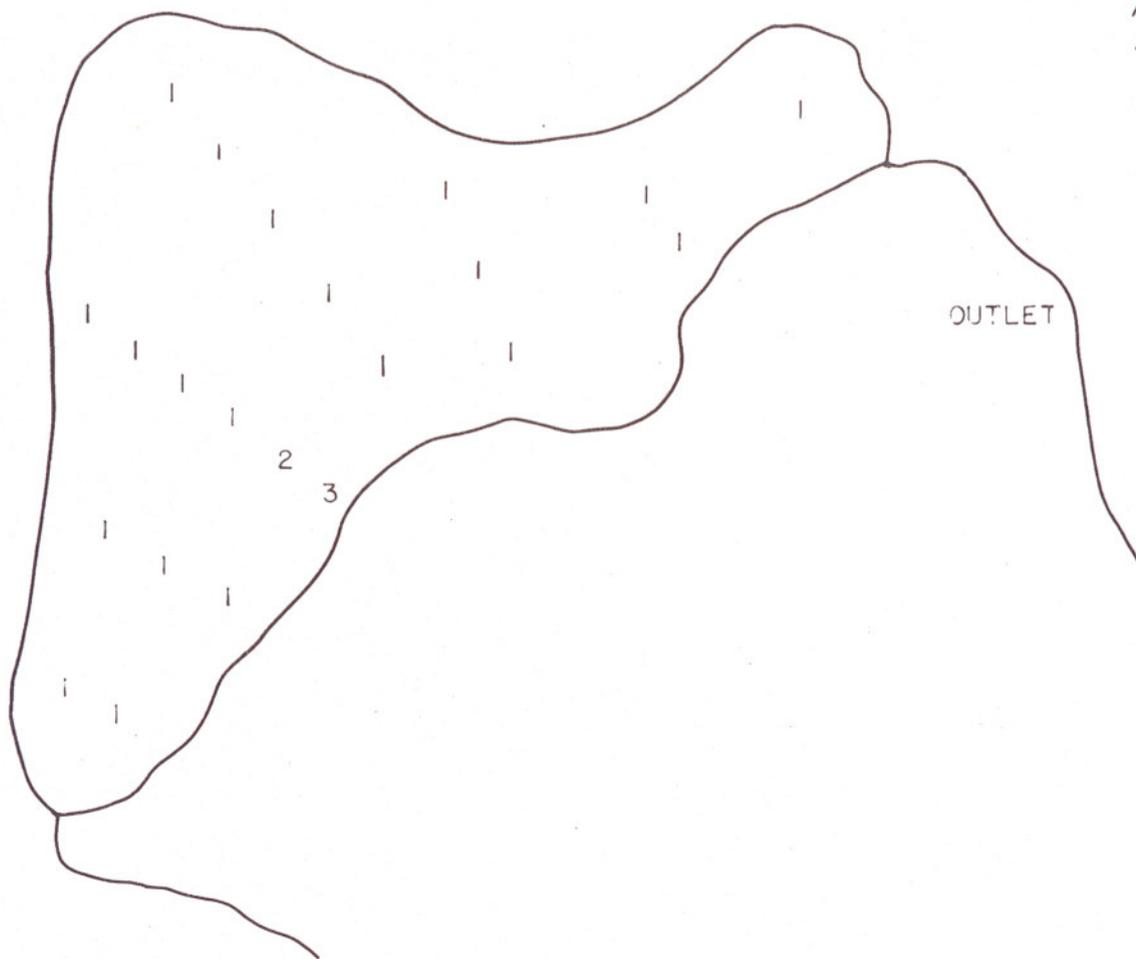

Temperatures

Maximum depth - 3 feet

Surface - 70° F.
3 feet - 70° F.

Matheson Pond is a typical example of a pond nearing the end of its productive life. The water has become extremely shallow due to silting in by sediment and decomposing vegetation, and it is warm at all depths during hot summer weather.

The pond has little potential for supporting any kind of a fishery.
