Minnows	Longnose sucker
Lake chub	White sucker
Common shiner	

Physical Characteristics

Area - 148 acres	Temperatures
	Surface - 68°F
Maximum depth - 62 feet	50 feet - 39°F

Principal fishery: Brook trout

Arnold Pond is located in the southwest corner of Coburn Gore near the Canadian border. Its main inlet, Massachusetts Bog Stream, enters at the southwest corner of the pond. A number of small springs and tributaries enter from all sides of Arnold Pond. Its outlet flows east into Mud Pond and eventually into Horseshoe Stream. There is a limited number of camps on the shoreline.

Water quality is good for coldwater species, with stratification occurring during the summer months. Arnold Pond is not stocked, due to access restrictions and the good spawning habitat available to both salmon and trout.

Arnold Pond is accessible from Route 27. The pond has special restrictions to protect the wild salmon and trout populations.
