Redbelly dace
Creek chub
Longnose sucker
White sucker

Physical Characteristics

Area - 267 acres

Maximum depth - 49 feet

Principal fisheries: Brook trout

Temperatures:

Surface - 77°F

48 feet - 46°F

Johns Pond is located southwest of Kennebago Lake. Many small inlets enter the pond from the surrounding hills and its outlet flows west into the Kennebago River. The pond's shoreline is lightly developed.

Water quality in Johns Pond is good for coldwater gamefish. A population of wild brook trout utilizes spawning and nursery habitat in the tributaries and along the shoreline to maintain a fishery. A small population of wild slow growing landlocked salmon is also present. Trout growth is good despite heavy competition from the other fish species. The pond is not stocked.

Johns Pond is accessible via private gated roads north of Route 16. The pond is open to fly fishing only in the summer and closed to fishing in the winter months.

Surveyed - July, 1959

Resurveyed - 1976, 1992
