Yellow perch	Pumpkinseed sunfish
Chain pickerel	Redbreast sunfish

Physical Characteristics

Area - 220 acres

Temperatures

Surface - 70° F.

Maximum depth - 30 feet

30 feet - 58° F.

Crooked Pond is one of a series of four medium-sized ponds whose outlet waters flow through the City of Lincoln into the Penobscot River. One way of reaching the pond is by boat *via* Folsom Pond. Turn left at Libby Corner on the so-called Transalpine road running from Lincoln to the Upper Cold Stream Ponds, then bear left.

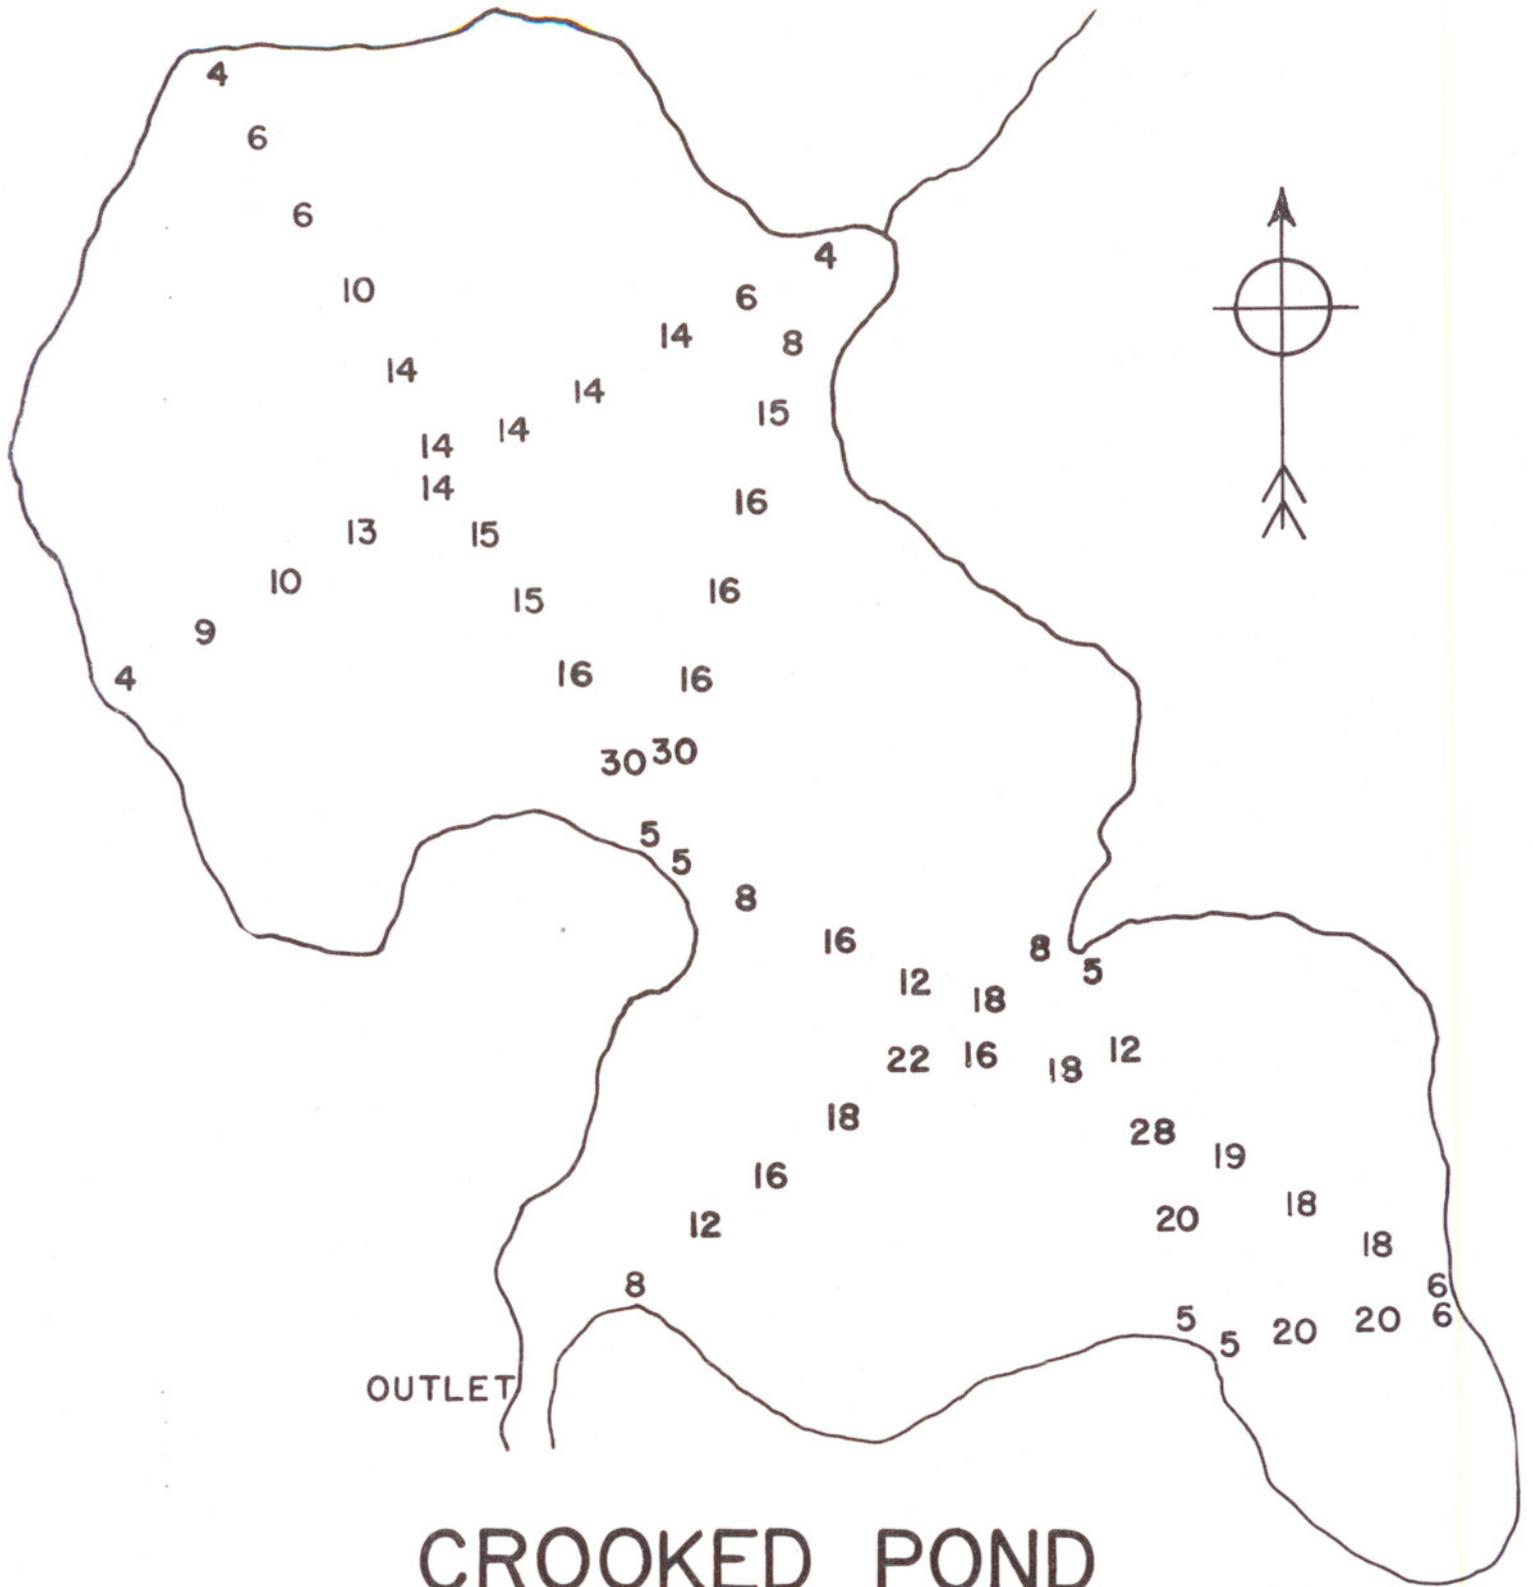

Crooked Pond is best suited for warmwater game fish. Smallmouth bass, white perch, chain pickerel, and hornpout are all established species. One tiny deep hole has cold water but is low in dissolved oxygen. An occasional trout may be taken during cool seasons.

No stocking is recommended.

Surveyed - July 1963

Maine Department of Inland Fisheries and Game

Published under Appropriation No. 7750
