Chain pickerel	Sunfish
Hornpout (bullhead)	

Physical Characteristics

Area - 280 acres	Temperatures
	Surface - 74° F
Maximum depth - 28 feet	25 feet - 72° F

Principal Fisheries: Smallmouth bass, white perch, chain pickerel

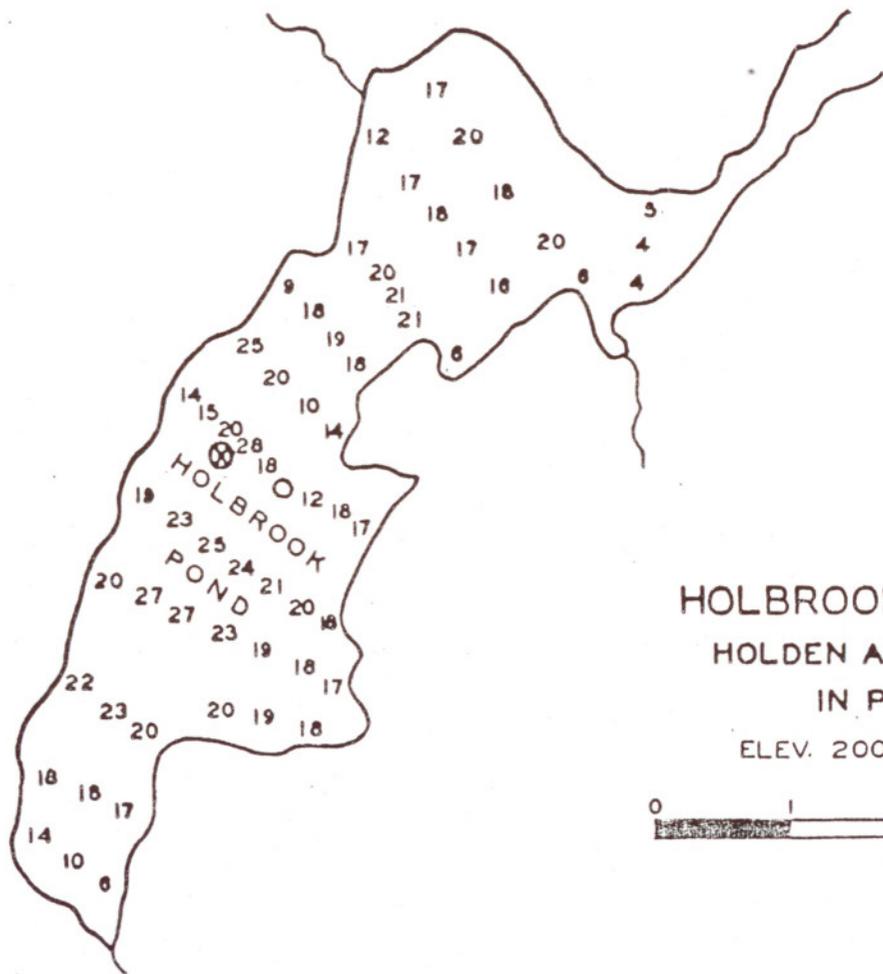

Holbrook Pond is a shallow, warmwater pond with a typical species assemblage. Smallmouth bass, white perch, and chain pickerel are all common there. Due to the pond's proximity to the Bangor-Brewer area, camps are quite numerous along the lakeshore. Since there is no official public landing, anglers would need to seek permission to launch a boat from a campowner.

Holbrook Pond is connected to Davis Pond (Eddington Pond) by means of a 1 1/2 mile-long fresh-water marsh known as "the Thoroughfare". This section is popular with nature lovers and canoeists because of its abundant ducks, loons, muskrats, and other forms of aquatic wildlife.

This pond should continue to be managed for its warmwater gamefish species. No stocking is recommended.
