

UPPER LA POMKEAG LAKE
T8 R6, T8 R7, Penobscot Co.
U. S. G. S. Seboeis Grand Lake, Me.

Fishes

Brook trout (squaretail)	Minnows
Yellow perch	Common shiner
Hornpout (bullhead)	Golden shiner
Eel	Fallfish (chub)
White sucker	Banded killifish

Physical Characteristics

Area - 217 acres	Temperatures
	Surface - 65° F.
Maximum depth - 6 feet	6 feet - 64° F.

Suggested Management

Upper La Pomkeag Lake is a very shallow lake with a soft, flocculent mud bottom and a luxuriant growth of aquatic plants. Water temperatures are nearly equal at all depths during the summer months. The lake supports an abundance of yellow perch, hornpout, and suckers. A small brook trout population is carried through the critical summer months by seeking areas of spring influence. Only a small trout fishery can be expected in the lake because of limiting habitat conditions and serious competition from coarse fish populations.

No stocking of any kind is recommended at the present time.
