Maximum depth — 28 feet

Surface — 75<sup>o</sup> F.  
24 feet — 54<sup>o</sup> F.

Principal Fishery: Smallmouth bass, white perch, chain pickerel

Parks Pond is a shallow warmwater pond with no trout or salmon habitat during the critical summer months.

Although an occasional trout which has dropped down from an inlet may be taken in the lake, management should be for the existing warm-water fish species.

Surveyed — August, 1942
