

MARR POND
Sangerville Twp., Piscataquis Co.
U. S. G. S. Guilford, Me.

Fishes

Eel	Minnows
White sucker	Bridled shiner
	Creek chub
	Northern redbelly dace
	Pumpkinseed sunfish

Physical Characteristics

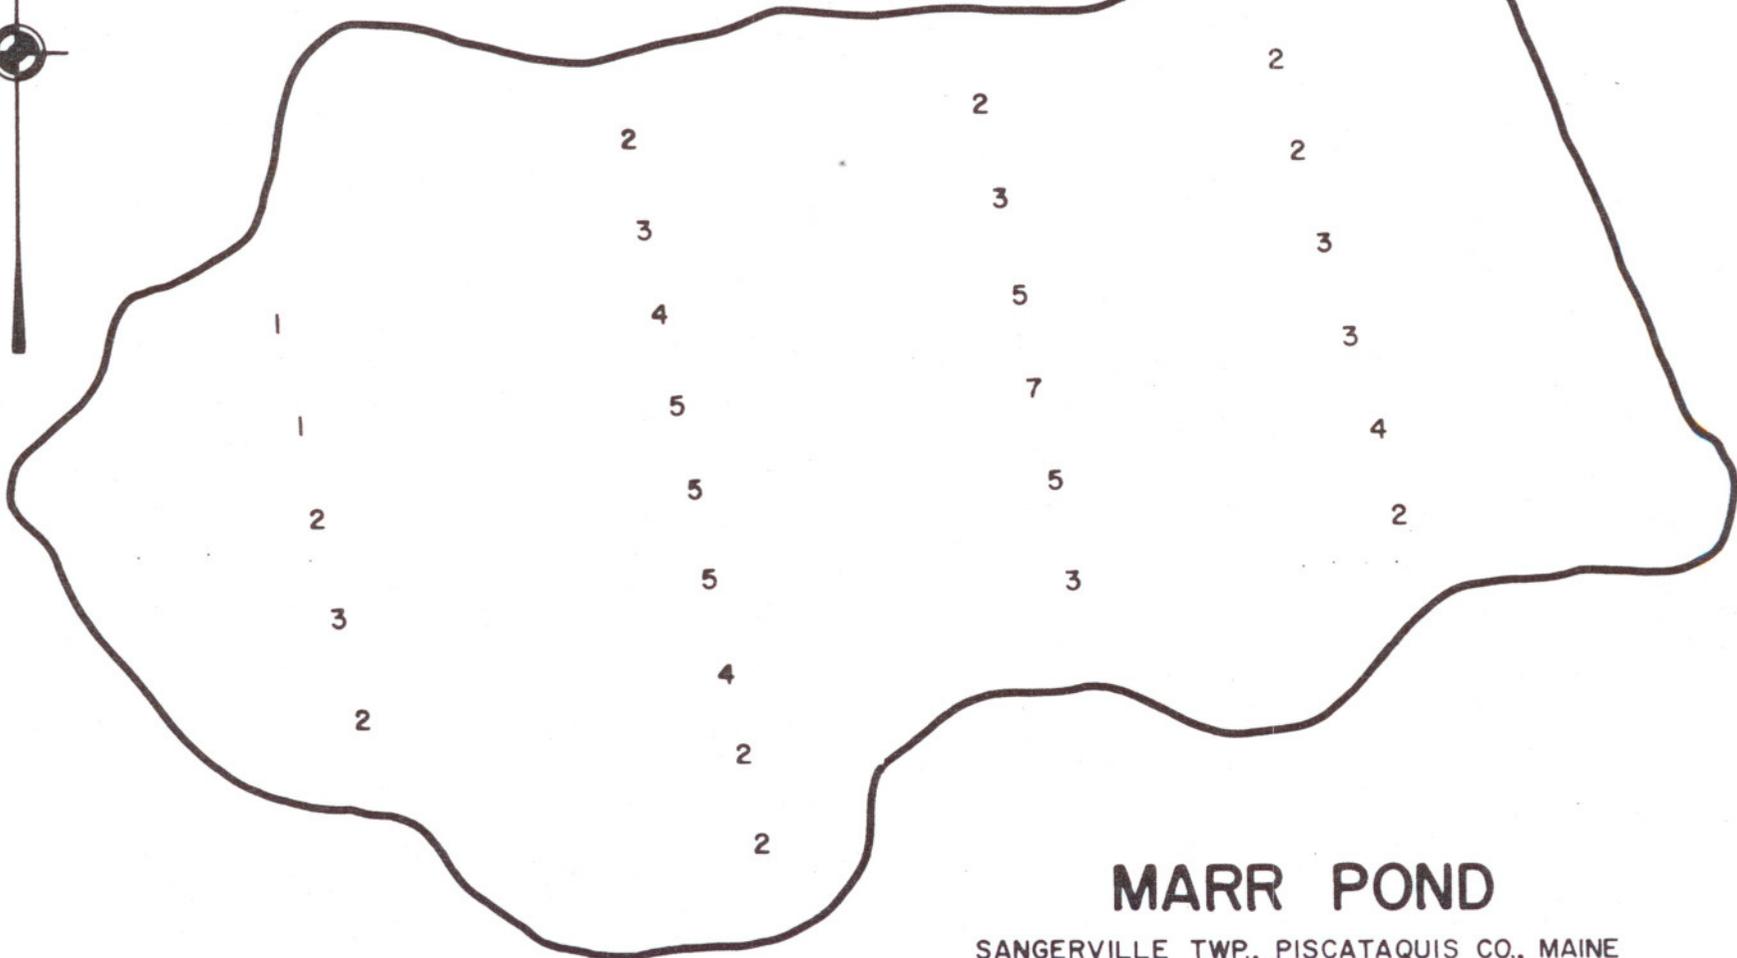

Area - 93 acres	Temperatures
	Surface - 69° F.
Maximum depth - 7 feet	6 feet - 69° F.

Marr Pond is a shallow, productive, warmwater pond located in hilly farming country. Farm woodlots surround most of the pond. Aquatic vegetation is abundant, both above and below the surface of the water.

Fishing pressure is extremely light, composed of neighborhood children who fish for suckers, sunfish, and eels. This shallow weedy pond provides good habitat for pickerel. Chain pickerel should be introduced under the direction of the Regional Fishery Biologist. The pond should be opened to ice fishing.
