

LILY (MERRILL) POND  
Concord Twp., Somerset Co.  
U.S.G.S. Bingham, Me.

Fishes

Yellow perch	White sucker
Chain pickerel	Hornpout (bullhead)
Minnnows	Pumpkinseed sunfish

Physical Characteristics

Area - 25 acres	Temperatures
Maximum depth - 6 feet	Surface - 70°F.
	5 feet - 67°F.

Principal fishery: Chain pickerel

Lily Pond lies near Route 16 within  $\frac{1}{4}$  mile of the Kennebec River. It is a bog-type pond which drains into the Kennebec via a flat, unobstructed outlet. Water temperatures are warm top to bottom during the summer, and the bottom is covered with a deep layer of organic matter. Due to inadequate water quality and competition from warmwater fish species, the pond is unsuitable for coldwater fish and should be managed for the existing warmwater species.

Surveyed - August, 1968  
(Revised - 1990)  
Maine Department of Inland Fisheries and Wildlife  
Funded in part by the Federal Aid in Restoration Act  
under Federal Project F-28-P
