

UNNAMED (CAMP STOVE POND) POND  
Johnson Mtn TWP., Somerset Co., Me.  
U.S.G.S. Long Pond, Me. (7 1/2')

#### Fishes

None

#### Physical Characteristics

Area - 10 acres	Temperatures
	Surface - 81°F
Maximum depth - 4 feet	34 feet - 81°F

Principal Fishery: None

Camp Stove Pond lies within sight of a gravel logging road that runs easterly from Rt. 201, south of Parlin Pond. The pond is formed by a boulder field that retards drainage in a small forested valley. The shoreline is predominantly floating bog surrounded by the remnants of a cut-over spruce forest. The pond bottom is organic muck with an occasional boulder out crop. The pond supports a sparse crop of aquatic vegetation.

The remains of old beaver dams can be found at the outlet of Camp Stove Pond. The outlet meanders under and through boulders overgrown with moss, shrubs, and small trees. No suitable brook trout habitat was observed. No fish were observed.

High summer water temperatures and lack of reproductive habitat make the pond unsuited for wild brook trout management. Camp Stove Pond is not a good candidate for stocking with hatchery brook trout.

Surveyed - August, 1995  
Maine Department of Fisheries and Wildlife. Funded  
in part by Federal Aid in Fish Restoration Act  
under Federal
