

KINGDOM BOG
(Dave's or Lilly Pond)
Montville Twp., Waldo Co.
U.S.G.S. Liberty, Me.

Fishes

Yellow perch	Minnows
Chain pickerel	Creek chub
Hornpout (bullhead)	Pearl dace
Eel	Pumpkinseed sunfish

Physical Characteristics

Area - 180 acres

Temperatures

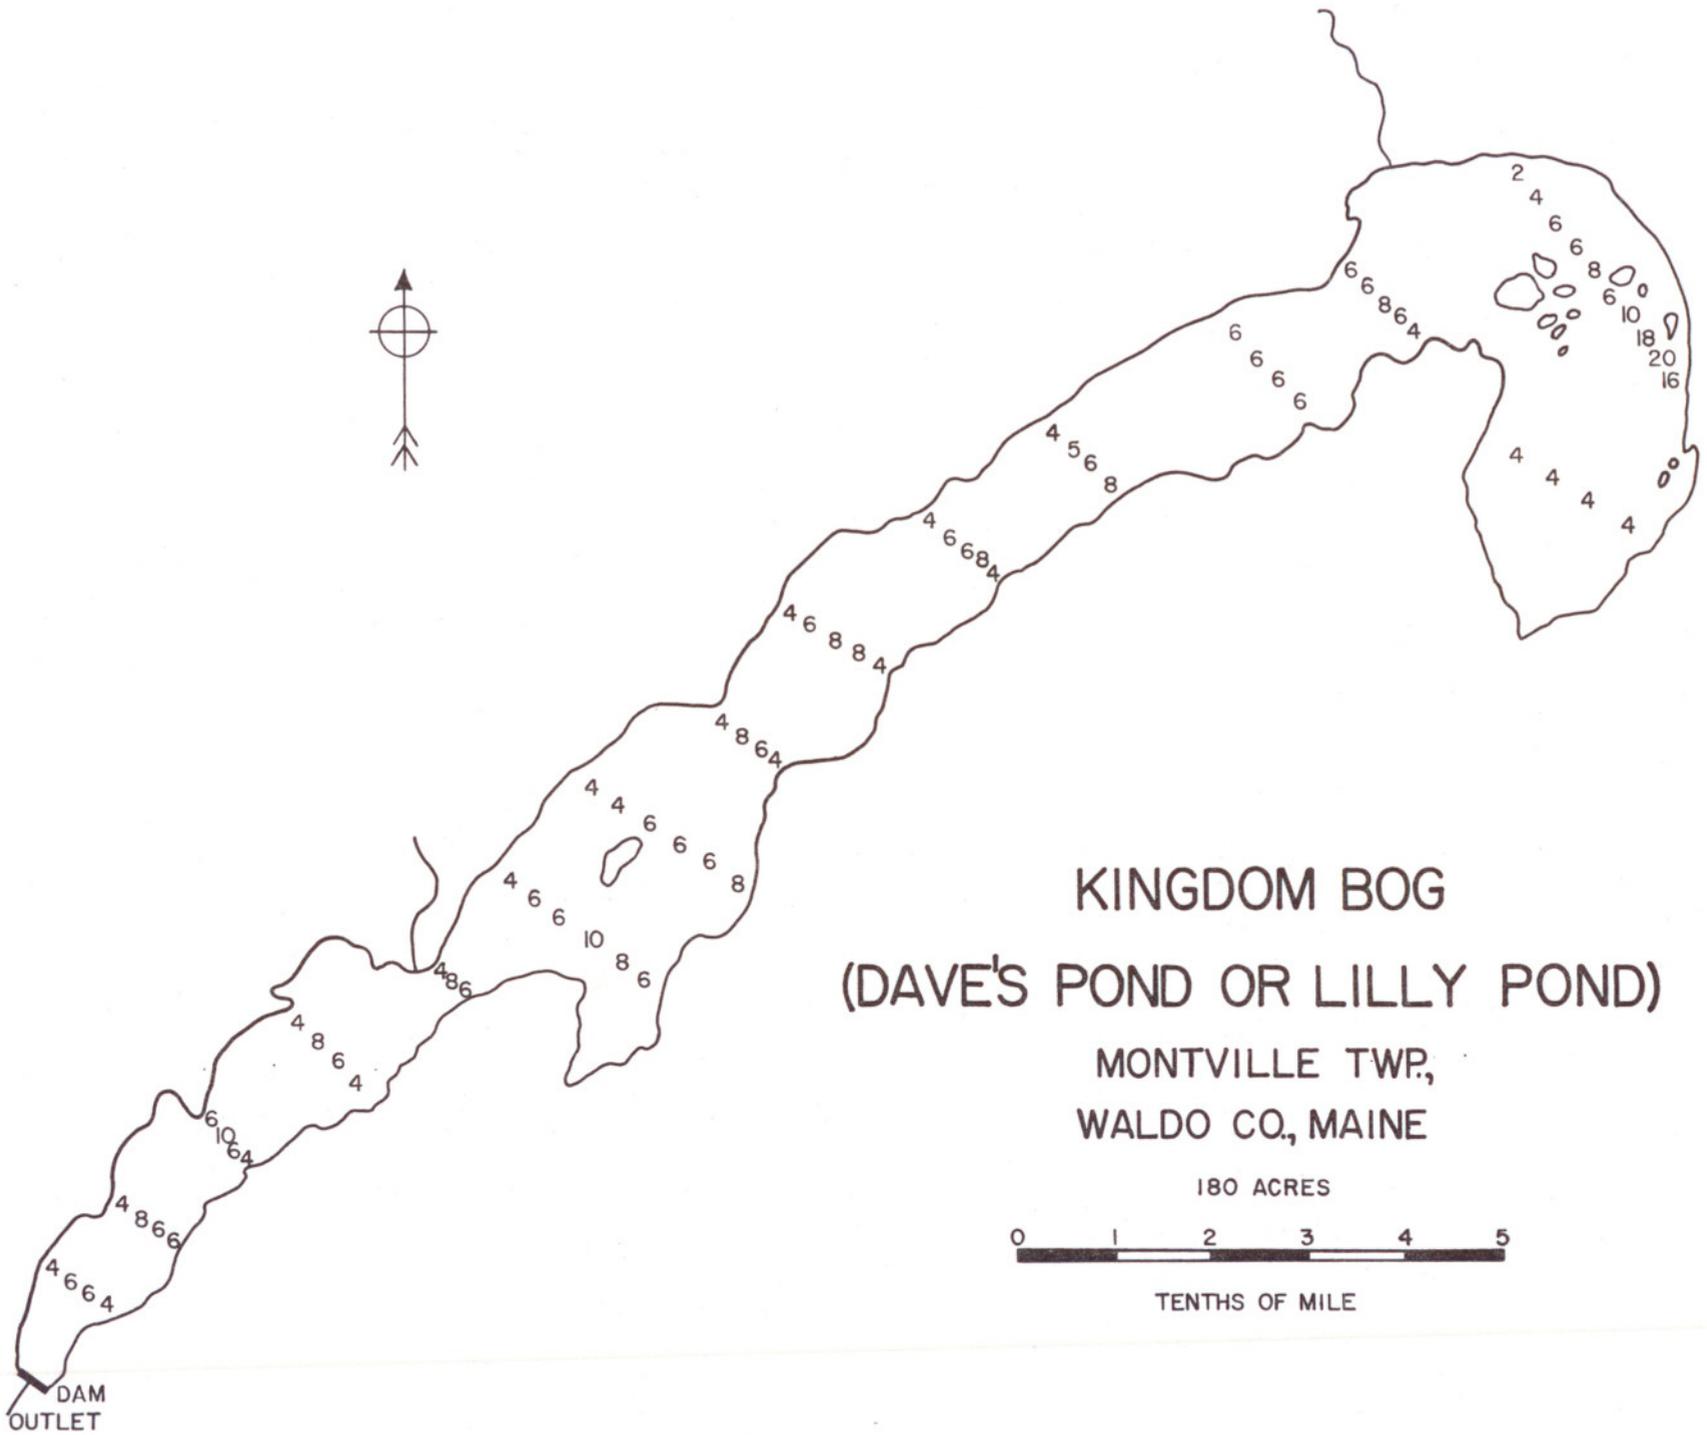

Maximum depth - 20 feet

Surface - 76° F.
19 feet - 51° F.

Kingdom Bog contains a healthy population of pickerel and is very popular with ice fishermen. The large areas of aquatic vegetation in Kingdom Bog provide ideal habitat for the chain-back.

The dam at the outlet of Kingdom Bog maintains a head of approximately 8 feet. Without this dam, the area of the pond would be greatly reduced. The dam leaks considerably and is in only fair condition. Its maintenance is important to realize the greatest production from the pond.

Kingdom Bog should be managed only for pickerel. No stocking is recommended.
