

BENNETT LAKE
Easton, Aroostook County
U.S.G.S. Westfield, Maine (7 1/2')

FISHES

Brook trout	Creek chub
Minnows	Pearl dace
Blacknose shiner	White sucker
Redbelly dace	

Physical Characteristics

Area - 18 acres	Temperatures
	Surface - 62°F
Maximum depth - 10 feet	10 feet - 61°F

Principal fishery: Brook trout

Bennett Lake is a small, shallow, spring fed lake with abundant aquatic vegetation. Summer water temperatures remain sufficiently cool to support brook trout. The lake was reclaimed in 1956 to allow intensive trout management.

The barrier dam on the outlet, built to prevent undesirable species of fish from re-entering the lake, has washed out twice. Construction of a satisfactory barrier dam is infeasible due to lack of good sites available.

Suckers and minnows have become re-established in Bennett Lake and are competing heavily with brook trout.

No known public access is available to Bennett Lake.
