

## ABRAMS POND

Eastbrook and Franklin Twps., Hancock County  
U.S.G.S. Tunk Lake and Ellsworth, Maine

### Fishes

Smallmouth bass	Eel
White perch	White sucker
Yellow perch	Minnows
Chain pickerel	Fallfish
Hornpout (bullhead)	Banded killifish
	Pumpkinseed sunfish

### Physical Characteristics

Area - 423 acres	Temperatures
	Surface - 72° F
Maximum depth - 27 feet	27 feet - 70° F

Principal Fishery: Smallmouth bass, white perch

This moderate-sized, clear water pond is located east of Route 200 in Eastbrook. Although public access is restricted, the landowner routinely allows access over a private driveway and road as long as visiting anglers ask permission. A sandy beach serves as a launching area for a car-top boat or canoe.

Abrams Pond supports a typical assemblage of warmwater sportfish. An inventory of the bass habitat and population was conducted in 1985 by towing a SCUBA diver around the pond. Overall, both the quantity and quality of the juvenile and adult bass habitat are considered to be quite good. Certain areas of the pond contain large numbers of submerged boulders and/or rocky shoals. Although bass fishing is not "fast", the pond produces reasonable numbers of 14-16 inch bass, along with some trophy-size fish in the 3- 4 1/2 pound range.

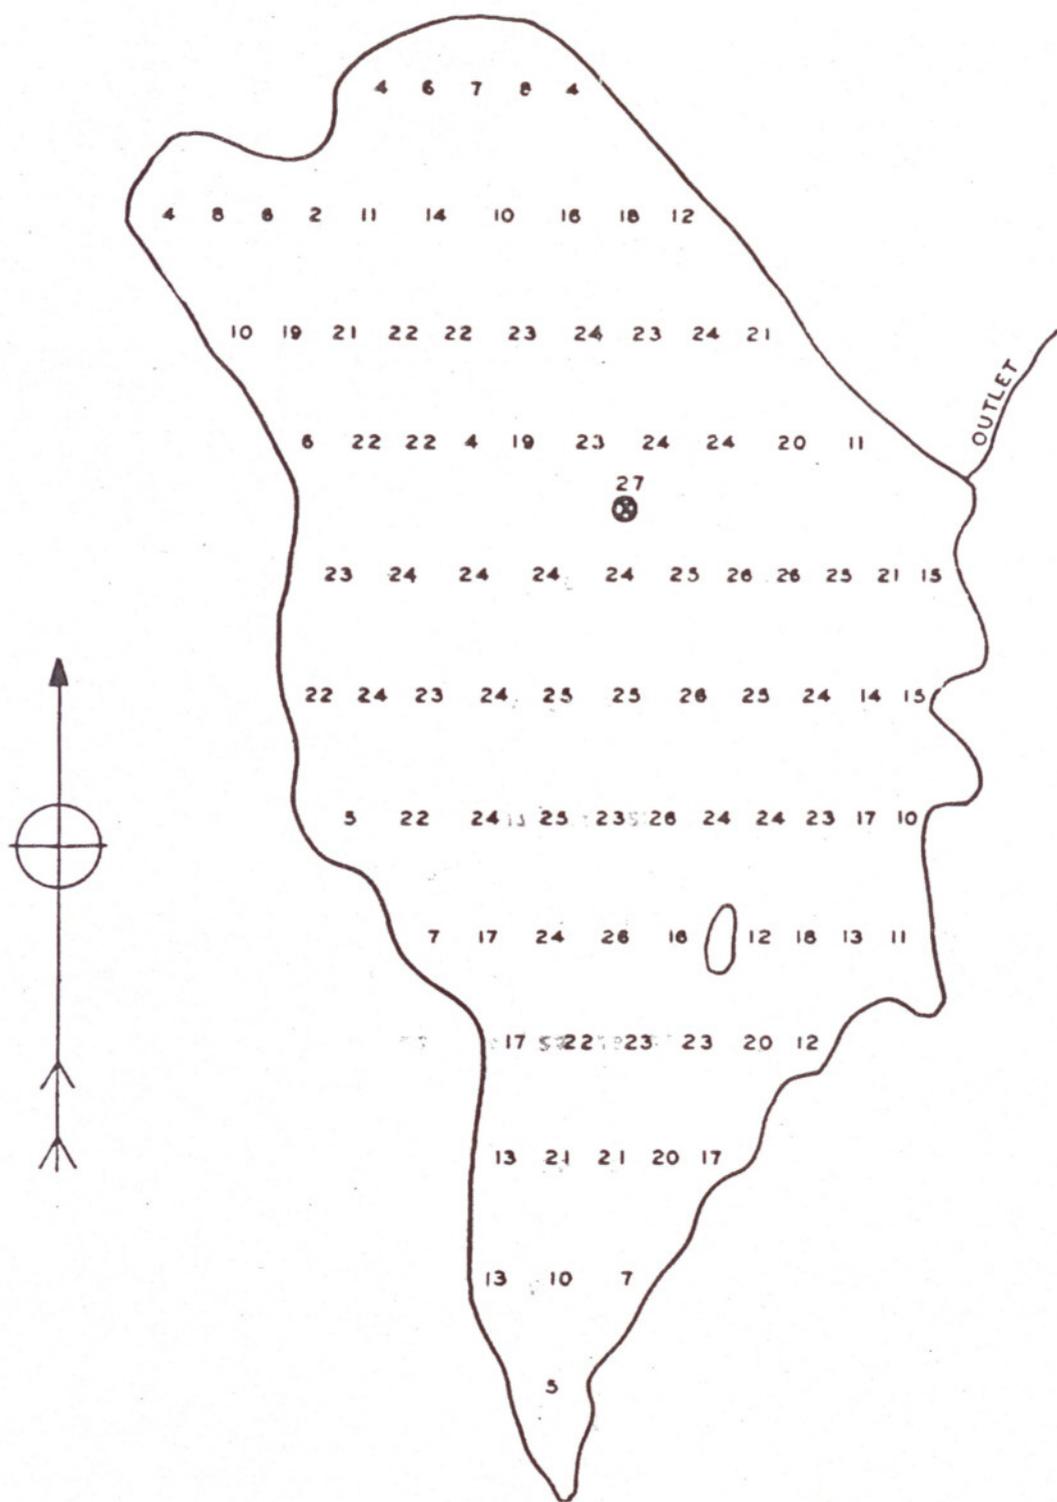

The pond is also a good choice for those anglers seeking larger than average size white perch. Both ice and open water anglers who are familiar with the locations of the "perch holes" make some fine catches with a good percentage of fish in the desirable 11-13 inch range.

Surveyed - August, 1942
