

GREEN LAKE
T35MD, Hancock Co.
U.S.G.S. Lead Mt., Me.

Fishes

White perch	White sucker
Yellow perch	Minnnows
Chain pickerel	Pumpkinseed sunfish
Hornpout (bullhead)	
Eel	

Physical Characteristics

Area - 83 acres	Temperatures
	Surface - 72°F
Maximum depth - 14 feet	13 feet - 71°F

Principal fisheries: White perch, chain pickerel

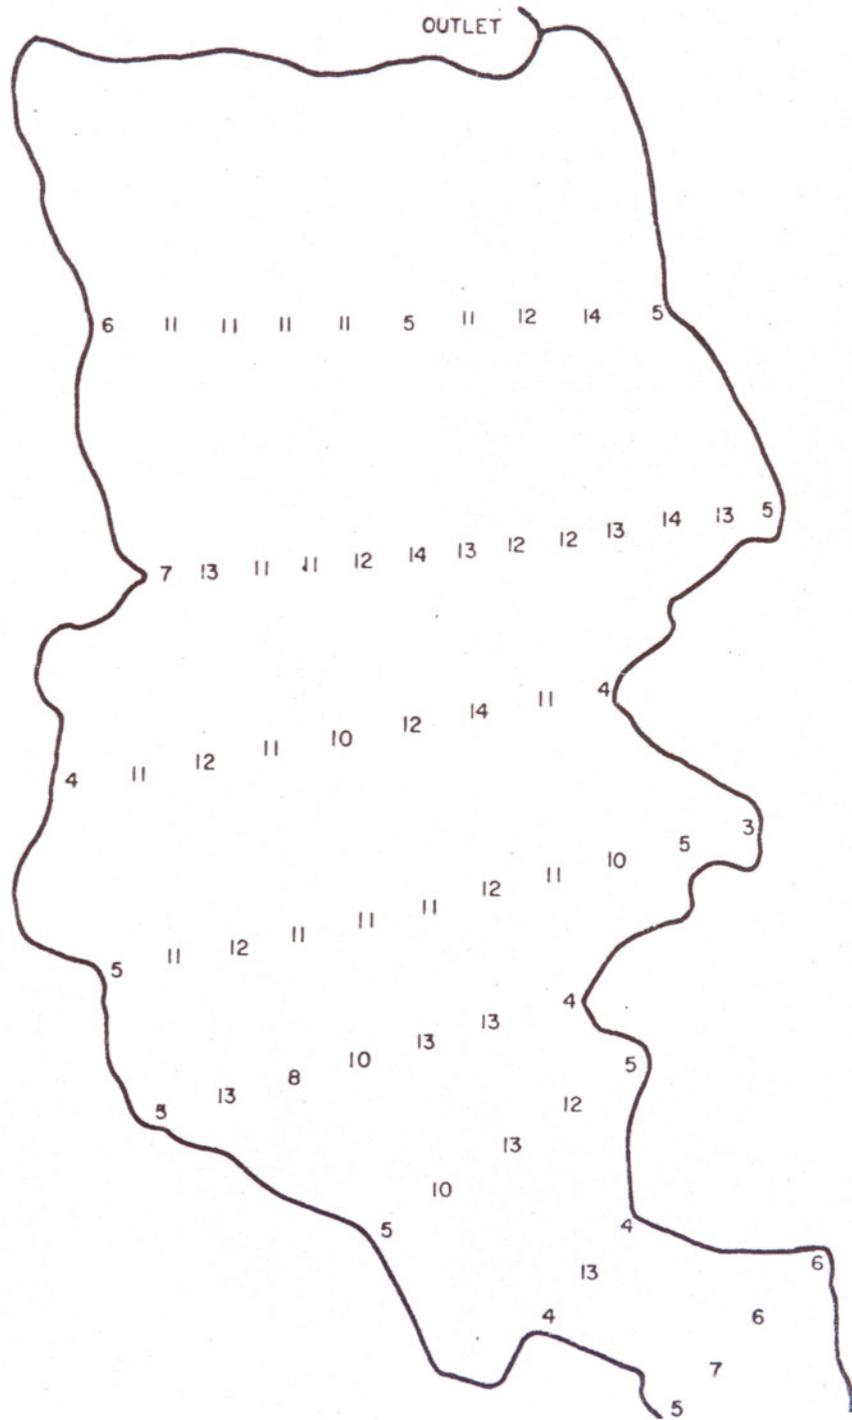

There are two Green Lakes in Township 35 MD; this one is located about 2 miles south of the so-called "Stud Mill Road". The closest access is over the 35-00-0 road. It is possible to drive quite close to the pond and carry in a canoe.

Green Lake is an unusually rocky lake with a high degree of turbidity. Although anglers may occasionally catch a trout that has moved in from adjoining waters, the lake is unsuited for trout during the summer months. No stocking is recommended.

We recommend management for the assemblage of warmwater species that currently inhabit Green Lake - white perch, pickerel, and hornpout. The lake is only lightly fished.

Surveyed - August, 1960
