

BERRY AND DEXTER PONDS

Winthrop and Wayne Twps., Kennebec County
U.S.G.S. Wayne, Maine

Fishes

Smallmouth bass	Minnows
Largemouth bass	White sucker
White perch	Hornpout (bullhead)
Yellow perch	Pumpkinseed sunfish
Chain pickerel	American eel

Physical Characteristics

Area	Temperatures
Berry Pond -174 acres	Berry Pond
Dexter Pond -111 acres	Surface - 72° F.
	25 feet - 55° F.
	Dexter Pond
	Surface - 72° F.
	23 feet - 53° F.

Maximum depth

Berry Pond - 25 feet
Dexter Pond - 25 feet

Principal Fishery: Largemouth bass,
Smallmouth bass, White
perch, Chain pickerel

Berry and Dexter Ponds should
continue to be managed for their warm
water species. Oxygen deficiencies occur
in the cool water below 15 feet. This

lack of dissolved oxygen and the abundant
populations of competitive species make the
ponds unsuitable for trout management.

Although not confirmed, it is
believed that northern pike have found
their way into these ponds. The habitat
of these ponds will support a
self-sustaining pike population once
spawning occurs.

A state owned carry-in access site
is located off state route 133 on the
north shore of Berry Pond.

Surveyed - August, 1940

Revised - 1953, 2000
