Physical Characteristics

Area - 32 acres

Temperatures

Surface - 72° F.

10 feet - 67° F.

Maximum depth - 10 feet

Principal Fishery: White perch, Chain
pickerel

Maces Pond is a small shallow pond best suited for warmwater species. Reports of the presence of largemouth bass were confirmed in 1998, unfortunately these bass were found to have the bass tapeworm parasite. This parasite causes a general deterioration of health and can cause bass to become sterile.

State Route 17 parallels the east shore of Maces Pond. The parking is very limited but a hand carry boat or canoe can be launched. Extreme caution should be used along this very busy roadway.

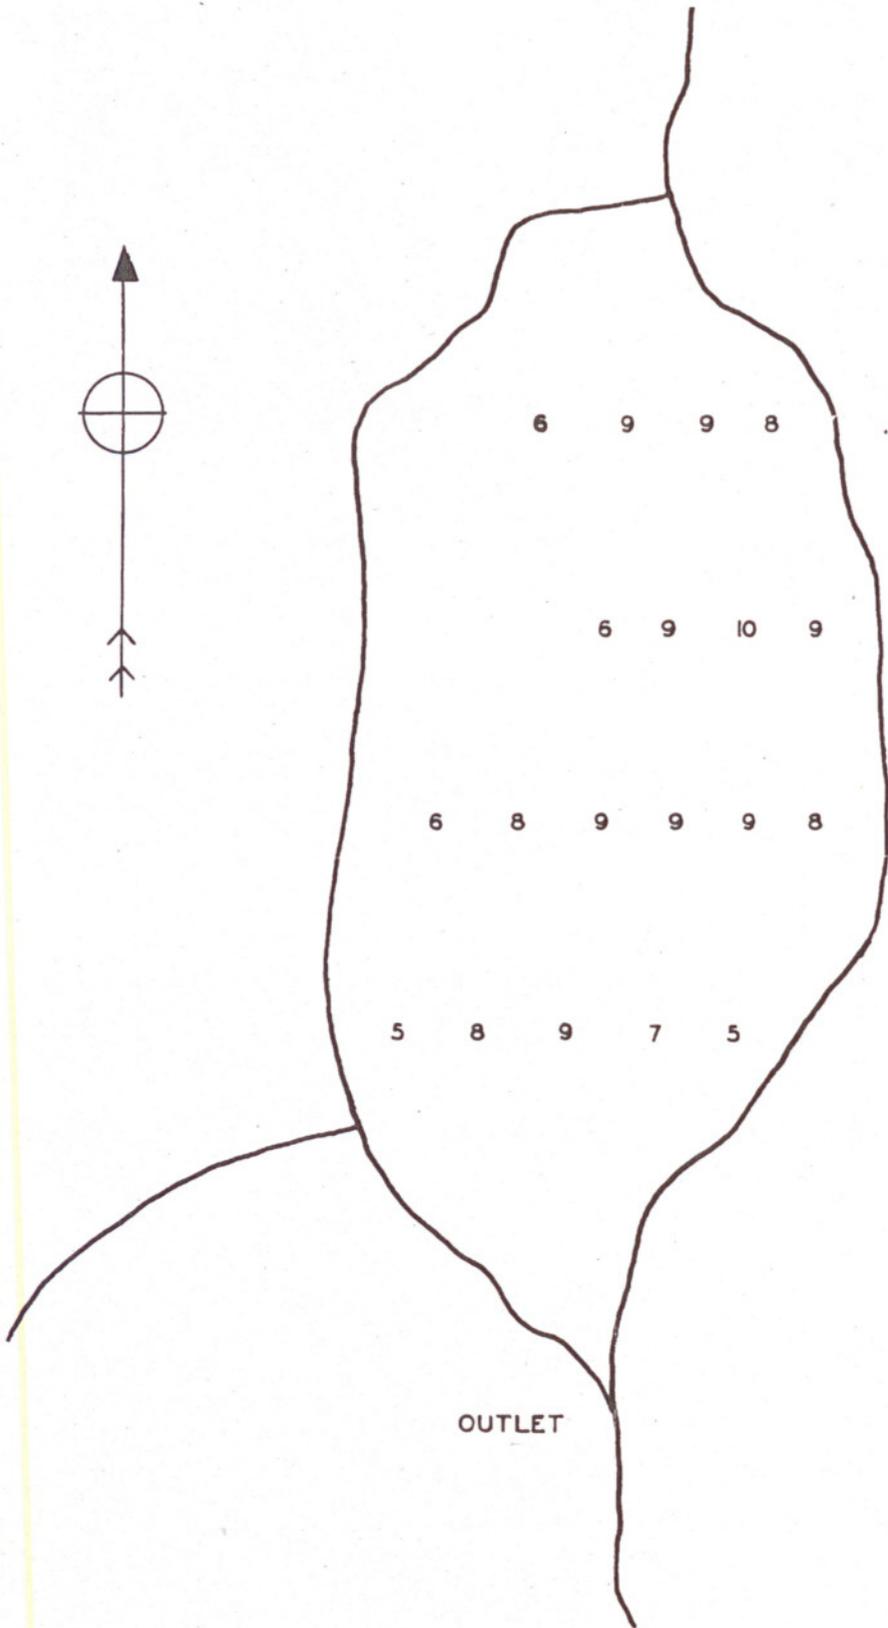

Surveyed - August, 1952

Revised - 2000
