

CLAY POND
Fryeburg Twp., Oxford Co.
U.S.G.S. Kezar Falls, Me. and N. H.

Fishes

Brook trout	Minnows
Yellow perch	Golden shiners
Chain pickerel	Pumpkinseed sunfish
Hornpout (bullhead)	

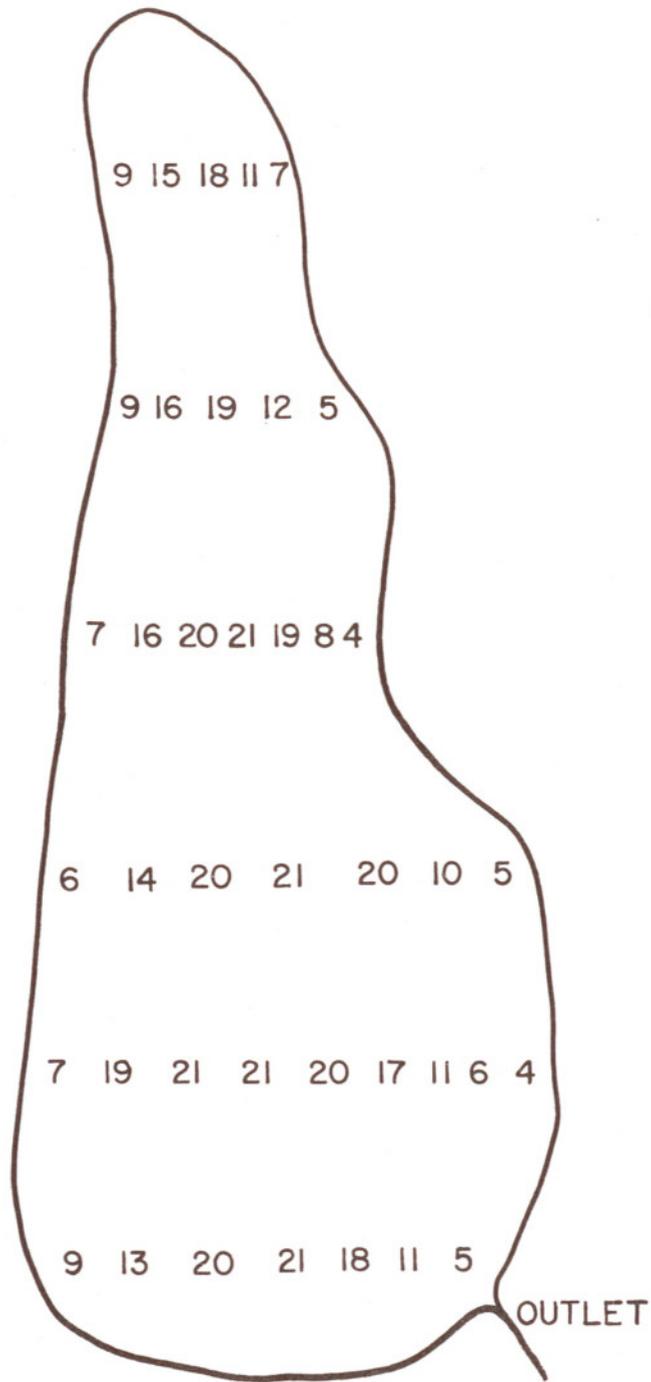

Physical Characteristics

Area - 21 acres	Temperatures
	Surface - 72° F.
Maximum depth - 21 feet	20 feet - 50° F.

During the warm summer months Clay Pond has a limited volume of cold water suitable for brook trout. However, the presence of yellow perch and pickerel probably prevents any natural brook trout population in this pond.

There is no possibility of total reclamation of Clay Pond because of the swampy shoreline and large bog area at the south end of the pond.

Considering the lack of trout waters in the area, it is recommended that Clay Pond be stocked with legal-sized brook trout each spring. These stocked trout should provide fishing during the spring and early summer months.
