

MORRILL POND
Hartland Twp., Somerset Co.
U.S.G.S. Canaan, ME (7.5')

Fishes

Brown trout	Minnows
Brook trout	Golden shiner
Rainbow smelt	Fallfish (chub)
White perch	White sucker
Yellow perch	Hornpout (bullhead)
Chain pickerel	Pumpkinseed sunfish
	American eel

Physical Characteristics

Area - 134 acres Temperatures
Surface - 75 ° F
Maximum depth - 48 feet 45 feet - 48 ° F

Principal fisheries: Brown trout, white perch, chain pickerel

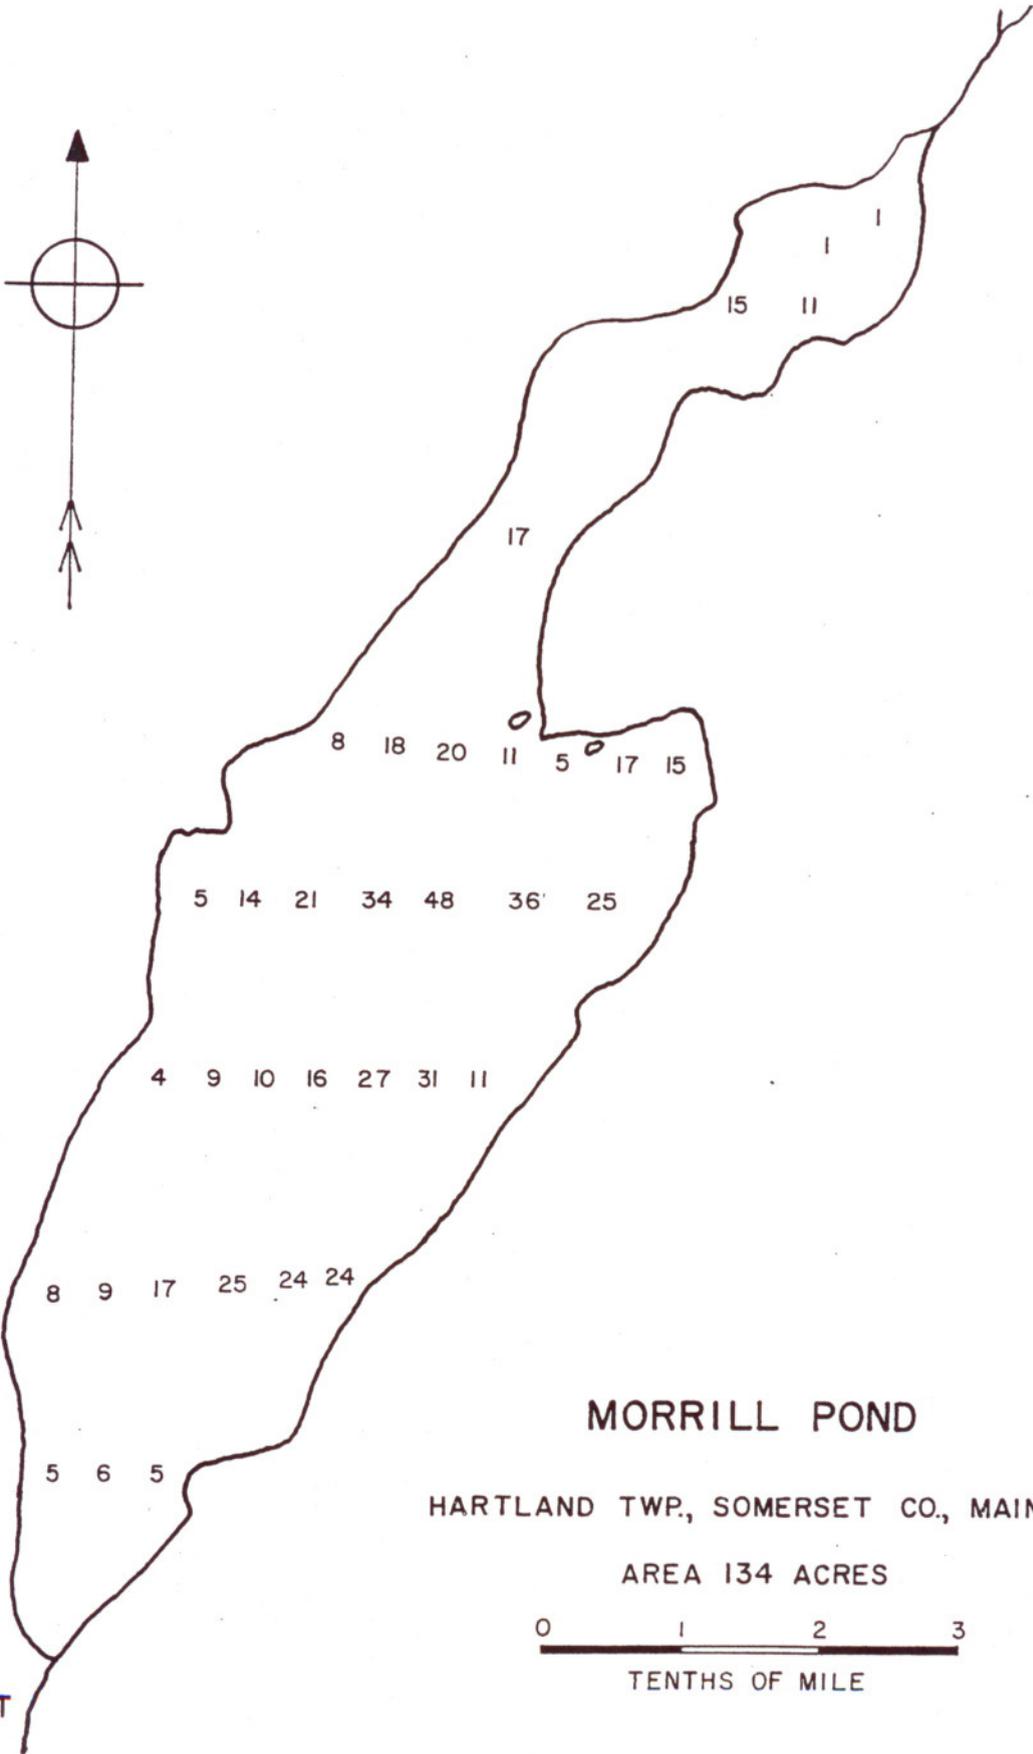

Morrill Pond, located in southern Somerset County, drains to Sibley Pond and Carrabassett Stream. A small boat landing located off the Morrill Pond Road provides access to the pond.

Morrill Pond was stocked with legal size brook trout for many years. Excessive competition from abundant warmwater species and marginal water quality resulted in poor returns from these stockings. Therefore, the Department terminated the brook trout program in 1982. Brown trout, which are able to withstand unfavorable competition and water quality, were introduced in 1985.

Annual stockings of browns are necessary because Morrill Pond lacks tributaries suitable for natural reproduction.

In addition to brown trout, white perch and chain pickerel are abundant and provide good action for winter and summer anglers.

Surveyed - August, 1953
(Revised - 1992) Maine Department of Inland Fisheries and Wildlife. Funded in part by Federal Aid in Fish Restoration Act under Federal Project F-28-P.
