

TOMHEGAN POND
T1 R3, T2 R3, Somerset Co.
U.S.G.S. Seboomook Lake, Me.

Fishes

Brook trout (squaretail)	Minnows (cont'd)
Hornpout (bullhead)	Creek chub
White sucker	Finescale dace
Minnows	Golden shiner
Common shiner	Cusk

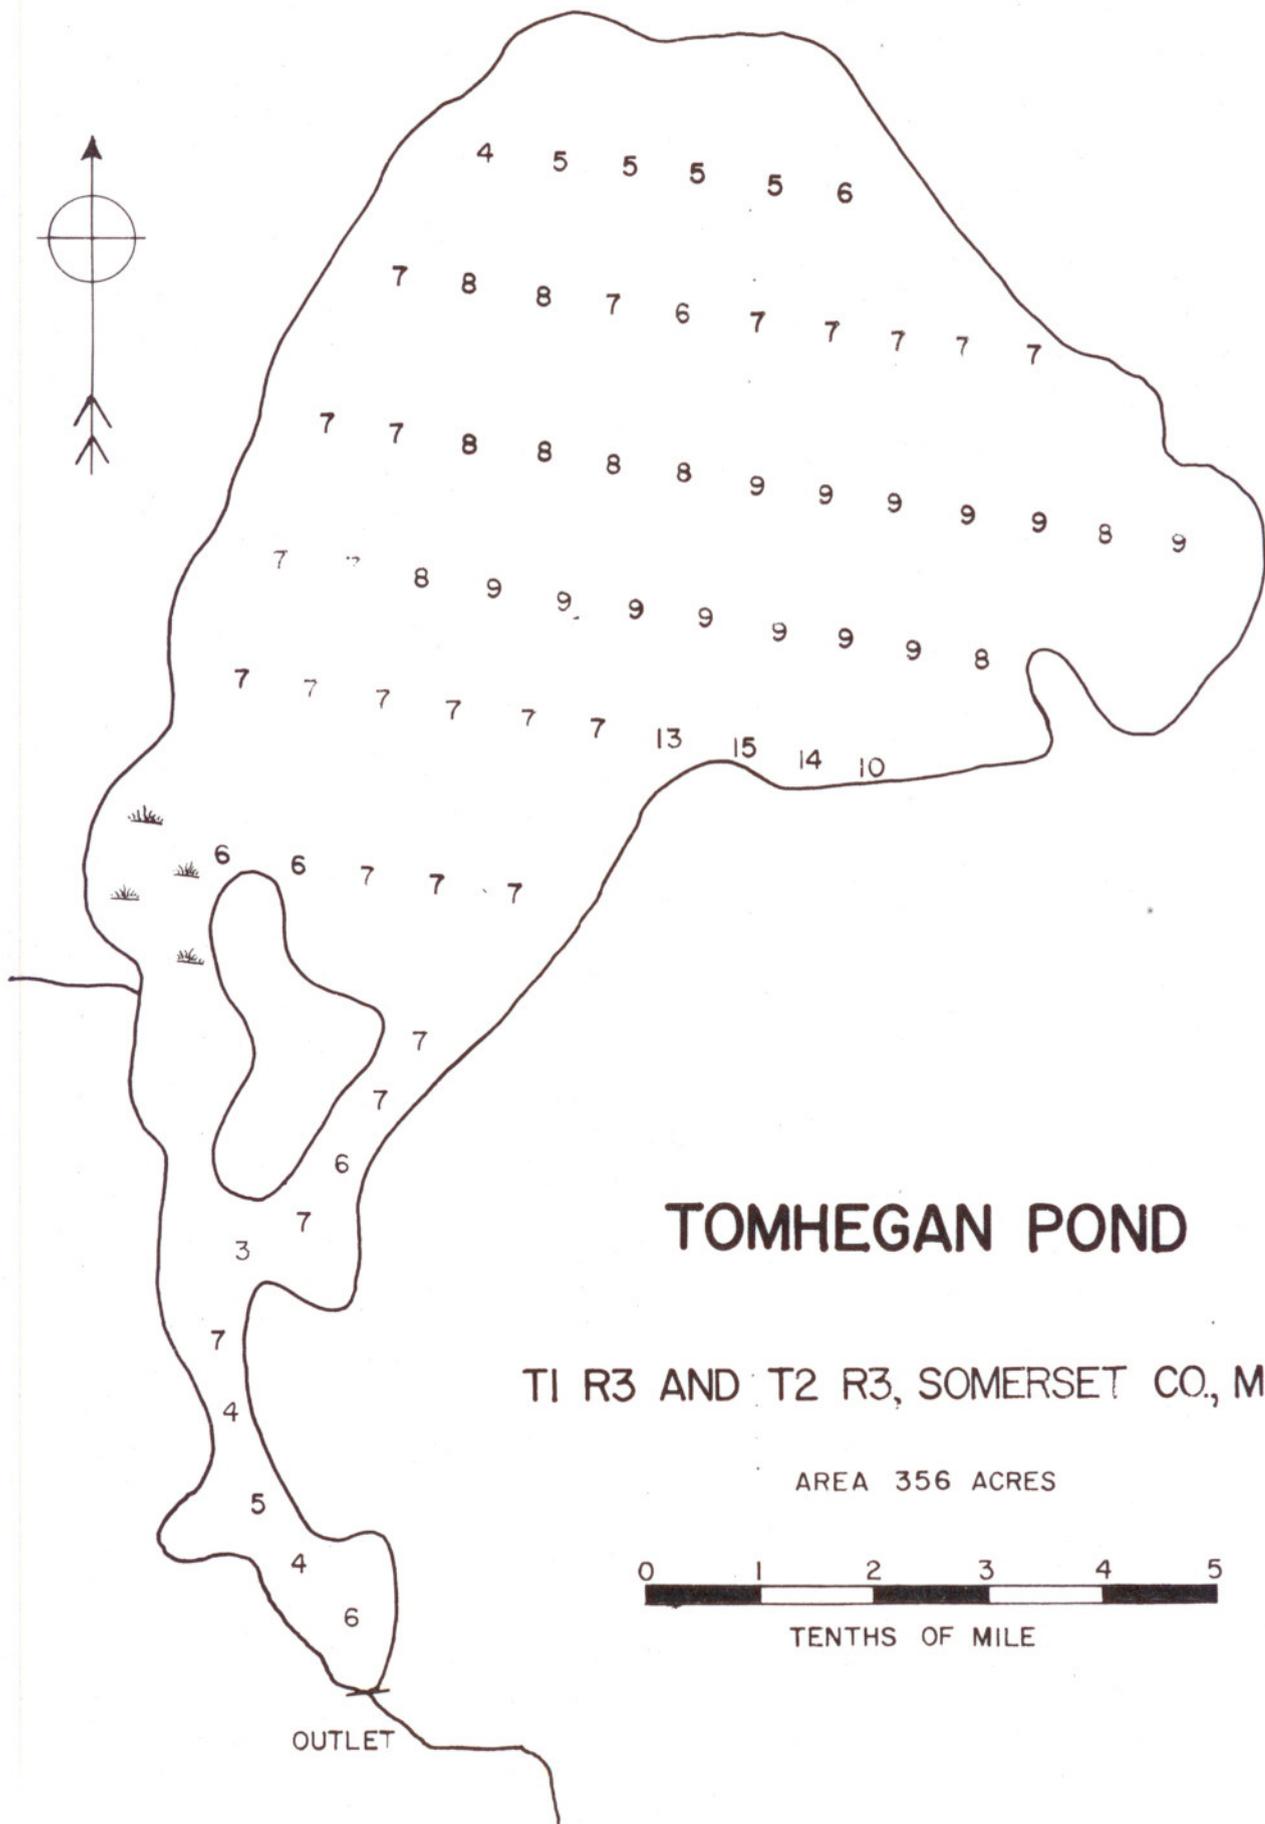

Physical Characteristics

Area - 356 acres	Temperatures
Maximum depth - 13 feet	Surface - 66° F.
	13 feet - 64° F.

Suggested Management

Tomhegan is a shallow bog-type pond. The water quality is suitable for brook trout, but competition from large populations of suckers and minnows is keeping the trout population at a low level. No stocking of hatchery fish is recommended.

A small driving dam, at the outlet of the pond, should be removed, or a fishway should be provided to allow the free movement of migrating fishes.
