SUICIDE DEATHS

In 2010-2012 there were 630 suicide deaths in Maine – an average of 210 suicides per year.¹

- The age-adjusted suicide rate among Maine people ages 10 and older was higher than the U.S. rate, **17.7 vs 14.6 suicides per 100,000**. The annual rate of suicide in Maine has remained relatively stable since 2000 (Figure 1).¹²

- Suicide was the **second** leading cause of death among Maine people ages 15-34 and the **fourth** leading cause of death among Maine people ages 35-54.¹

- More Maine people ages 10 and older die from suicide than by homicide. For every homicide there were approximately **seven** suicides.¹

**Figure 1. Age-Adjusted Suicide Deaths, Hospital Discharges and Emergency Department Visits¹**

SUICIDE ATTEMPTS

Age-adjusted emergency department visit rates due to intentional self-injury have increased significantly since 2000 (Figure 1).

In 2009-2011:

- There were 7,560 **emergency department visits** related to intentional self-injury.

- Fifty-two percent of all intentional self-injury related **emergency department visits** were among Maine people ages 15-29 years old.

**Age-adjusted hospital discharge visits due to intentional self-injury have remained steady since 2000 (Figure 1).**

In 2009-2011:

- The age-adjusted rate of intentional self-injury related **hospital discharges** was significantly higher among women than men (123.3 compared to 82.8 per 100,000).

- Seventy-five percent of all intentional self-injury related **hospital discharges** were among Maine people ages 15-49 years old.

**Figure 2. Suicide Methods among Maine Persons ages 10 and Older, 2010-2012¹**

SUICIDE METHODS

- Firearms were used in **51 percent** (320) of suicides in Maine while the second leading method, suffocation (including hanging/strangulation), accounted for **23 percent** (144) of all suicides (Figure 2).¹
SUICIDAL THOUGHTS & ATTEMPTS

In 2011-2012:

- **Three percent** (N=64,346) of Maine adults ages 18 years and older reported having suicidal thoughts in the past year.4

In 2013:

- **Fifteen percent** of Maine high school students and **17 percent** of Maine middle school students reported seriously considering suicide (past year for high school; ever for middle school).5
- **Eight percent** of Maine high school students and **6 percent** of Maine middle school students reported attempting suicide (within past year for high school; ever for middle school).5

DISPARITIES: Gender & Sexual Orientation

Men are more likely to die by suicide than women.

- Suicide is **four times** more likely among males than females representing **80 percent** of all Maine suicides in 2010-2012.1
- Firearms were the most common suicide method among men (**57 percent**) of all suicides among men while poisoning was the most common suicide method among women (**46 percent**) in 2010-2012.1

Girls are more likely to consider suicide than boys.

- High school girls were significantly more likely to consider suicide (**18 percent**) than high school boys (**11 percent**, Figure 3).5

Maine high school students who are gay, lesbian or bisexual are more likely to consider and attempt suicide.

- In 2013, among gay, lesbian or bisexual Maine high school students, **47 percent** reported suicidal thoughts as compared to **13 percent** of heterosexual students (Figure 3).5
- **Twenty-four percent** of gay, lesbian or bisexual Maine high school students reported having attempted suicide within the past 12 months as compared to **7 percent** of heterosexual students (Figure 3).5

Knowledge is power. Use it wisely.
